SHIP BOARD MARINE POLLUTION EMERGENCY PLAN
INITIAL NOTIFICATION

Additional Information:
Brief Details of the Incident:

While in the process of calibrating the the fuel meters onboard the vessel, diesel vented and overflowed the containment pan causing approx 10 gals of #2 diesel to enter the water. Spill was immediately boomed off and cleaned up with absorbent pads. Overflow tank on the vessel was designated to be the tank to receive the fuel coming from the calibration unit. Tank was manually sounded which resulted in a zero gallons reading. Once the tank was going to have approx 2/3 of it's capacity filled the transfer would have been stopped and supply fuel from the overflow tank would have been arranged so that the overflow tank would have been able to circulate fuel within itself. After further investigation, we found that the overflow tank vent line (which is a common line for all fuel tanks, was plugged with a temporary plug that was installed from the builders to test pressure in line. This plug was never removed.

Actions Being Taken To Stop, Minimize and Clean The Release:

Overflow tank was gas freed. 3rd party Clean Tank tech inspected tank and found temporary plug from builders was never removed after line testing was performed. Overflow is now able to continue with fuel meter calibrations.

Number of Crew and Details of Any Injuries or Deaths:

N/A

Were evacuations needed: ○ Yes ◉ No **If Yes - Explain:**

Others:

Additional reports may be required depending on the severity of the spill (i.e Human health or the environment). Refer to section 4.4.3 of the VGP for additional information if the spill occurred within 3 NM of the coast.
