Thermal treatment at Adso.

bif rule.pdf
This letter came from LDEQ who believes that the facility is not regulated.

Oops – forgot the call in # 866 299 3188 214 665 7363.

TDU team,

Region 6 has been asked to give a regulatory interpretation on how a thermal desorption unit operating at a refinery would be impacted under RCRA and the CAA. There is some urgency in this request as R6 believes there are units of this type operating in R6 currently and the requestor has announced that they intend to build a new unit in R6 in the near future.

This team is tasked with determining RCRA implications of a desorption unit receiving oil bearing hazardous secondary materials managed under the exemption at 261.4 (a)(12). TDU's receive solid oil bearing material and heat it to drive off VOC's. The unit produces a solid stream (F037 hazardous waste in this case); a liquid oil/water stream (which will go through a centrifuge) and a gas stream (which goes through a chiller to capture some of the entrained VOCs). The gas stream following the chiller is referred to as the "non-condensable" stream.

Eventually, the team will need to address all RCRA implications, but we need to begin with how the non-condensable stream is managed. There are three options for management of the non-condensable stream 1) the stream can be routed back to the fire box where it will be burned to control odors, emissions, and provide fuel for further desorption (during the inspection of the TD*X owned unit at the US Ecology landfill TD*X representatives showed data indicating that the non-condensable stream provided approximately 1/3 of the energy value needed to run the unit; 2) the stream can be routed to a flare; 3) the stream can be routed to a thermal oxidizer.

Questions the team needs to address:

- If material exempted under 261.4 (a)(12) is burned in the reclamation process; does that effect the exemption?

- If a material receives a conditional exemption before and after reclamation is it always exempt during reclamation even if that reclamation results in burning some or even all of the hazardous constituents?
- Do any of the exemptions at 261.6 (a)(3) have any bearing on this stream?

Let's make this meeting as productive as possible, please share appropriate guidance documents, or federal register notices with the group prior to the meeting. Please let me know if you have any questions.

Subject: REMS - REQUEST!

Hello all!

Yes, if you are not tired of requests from me, you will get there.

We had a very good meeting with our Air Enforcement colleagues about our RCRA Air NEI and their expansion of the Air Toxics NEI into new areas. One follow up was a request that we check and see if there are any recent or scheduled RCRA inspections or active RCRA cases against three companies that they have sent information requests to.

Veolia, Tradebe and U.S. Ecology

If you have anything, please send me a note with any details and copy Kathryn Caballero. It may be an excellent chance to think and act cross media…

THANK YOU.

Also, We have our REM call scheduled for next week. Please let me know if you have any topics you would like on the agenda.

Best,
Andy

To: Pearson, Evan [Pearson.Evan@epa.gov]
CC: Tidmore, Guy [tidmore.guy@epa.gov]
Subject: Louisiana TDU activity - CWMLC [update]
Attachments: 20141229_9581834_crp_comments.pdf; AI742 PUBp PN CWM HW Receipt RCRA_cp.pdf; 9710826_NOD_20150409_crp_comments.pdf; CWM_Lake_Charles_TDU_NOD_comments_crp.pdf; Pages from 10076710_CWM_NOD2_response_160205_cp.pdf

Gentlemen, the attachments and summary below concern Chem Waste's proposal in Louisiana to locate TDUs at a hazardous waste site and combust the non-condensible portion of the organic chemical constituents in an associated thermal oxidizer unit..No draft permit has been issued by the DEQ- however, Chem Waste is not proposing the appropriate technical standards set forth in Region 6"s recent CAFOs on similar units .My understanding is that Chem Waste's position is that uncontained gas is not a solid waste when combusted. I believe EPA should look into this situation , as it could become an outlier from the current regulatory regime concerning TDUs

Update on CWM Lake Charles TDU Permit:

Since May 2015 CWM and LDEQ have interacted with an NOD response, a second NOD and that response.

- CWMLC has not provided any technical documents, plans or commitments to incorporate any of the MACT EEE emission limits on the thermal oxidizer that combusts 100% of the TDU process vent emissions.
- CWMLC has responded that the vent gas is "uncontained gas" and not subject to any RCRA jurisdiction.
- LDEQ has received these comments, but as yet has not issued any questions or determinations that the TDU vent gas being combusted triggers the incorporation of any of the MACT EEE requirements into the Subpart X permit.

If this proceeds to Draft Permit without any further substantive interaction it is likely that no technical requirements to comply with MACT EEE will be in the draft permit. No AWFCO. No emission limits. No OPLs. No stack test. No WAP to identify air pollutants in the feed that will cause MACT EEE emission limits to be exceeded (i.e. chlorine, mercury, metals).

Subject: REMS - REQUEST!

Hello all!

Yes, if you are not tired of requests from me, you will get there.

We had a very good meeting with our Air Enforcement colleagues about our RCRA Air NEI and their expansion of the Air Toxics NEI into new areas. One follow up was a request that we check and see if there are any recent or scheduled RCRA inspections or active RCRA cases against three companies that they have sent information requests to.

Veolia, Tradebe and U.S. Ecology

If you have anything, please send me a note with any details and copy Kathryn Caballero. It may be an excellent chance to think and act cross media…

THANK YOU.

Also, We have our REM call scheduled for next week. Please let me know if you have any topics you would like on the agenda.

Best,
Andy
