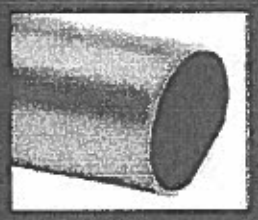
Original lead water service piping



New copper service piping

Dear Kimbark Homeowners,

In many cases, your water service pipe from the street to your home is the original lead pipe. These pipes tend to be substantially deteriorated and approaching the end of their service lives. The City of Chicago has installed a new water main pipe from 4700 to 5000 South Kimbark. In the near future, the City of Chicago will transfer your water service to the new water main.

Once all the homes are connected to the new water main, the City of Chicago will repave the street. If you are interested in replacing your existing lead water service pipe with a new copper water service pipe, please contact Easton Construction, Inc. as soon as possible.
