I believe TCEQ with EPA input: https://www.tceq.texas.gov/news/releases/tceq-monitoring-itc-fire-site-for-potential-health-risks-supporting-emergency-personnel

All press releases (new one today): https://www.tceq.texas.gov/news

Erin E. Chancellor
Chief of Staff | Office of the Regional Administrator
U.S. EPA Region 6

> TCEQ is working with EPA, the Coast Guard, and ITC's contractor to assess impacts of firefighting foam on waterways adjacent to the facility. TCEQ's contractor is sampling water from Tucker Bayou to the Houston Ship Channel and at drainage outfalls adjacent to the facility. Samples have been submitted to a certified water laboratory; however, results can take between 24 and 72 hours to be processed and finalized.

Hi Jake,

Thanks for the question. I'm looping in Christian from my office, and David Gray from our Region 6 (Dallas) office, to help with your question.

Thanks,
Matt

Subject: Deer Park Petrochemical Fire

Matthew,
I have been following the Deer Park Petrochemical Fire in Texas and saw they were using AFFF on the fires. While I know it may have been necessary on the petroleum based fire is the EPA working to contain the AFFF containing PFAS on that site post fire? Does the EPA have a clean-up plan for large events like this one to contain the PFAS discharge?
