Subject: Follow-up to today's Wolverine Discussion - EPA's SDWA Section 1431 Consent Order with DuPont/Chemours for PFOA contamination in WV and OH

Hi Eric and Richard,

Thanks for meeting with us today to discuss MDEQ's efforts on PFAS contamination.

You can find a copy of our SDWA Section 1431 Consent Order with DuPont/Chemours for PFOA contamination in WV and OH, which was amended this past January with the new long term health advisory level of 70 ppt - https://www.epa.gov/sites/production/files/2017-08/documents/2017amendedorderdupont.pdf

Press release at https://www.epa.gov/newsreleases/epa-amends-drinking-water-order-dupont

The responsible parties – Chemours and DuPont – must test private and municipal drinking water for PFOA, and if PFOA levels are above 70 ppt, must install and maintain treatment until levels are at or below 70 ppt for PFOA.

We welcome a copy of the letter from MDEQ's Director to Wolverine on the state response efforts would be helpful as well as any further information you may have on the structure and scope of the state-wide response effort to PFAS findings.

Thank you again for your time. We look forward to working with you on this evolving issue.

Best wishes,

Heather
