Jane,

Just reacting to the introduction to the supplement here.

Nafion I and II and all of the Mei Sun compounds were first described in Strynar et al. 2015 (attached) from water samples collected in the Cape Fear downstream of (then) Dupont in 2012.

These compounds aren't "new" and not from 2017. The state may have discovered them at that time but the PFAS community knew all about this for a long time.

Strynar et al. 2015 is the best summary of the scope of the compounds that were anticipated to be in the drinking water of the region since 2012.

Thank you,

Andy

Subject: supplement research strategy

Hi guys,
Attached is the R21 supplement that I plan to submit by Friday.

I need to add the references in ... but could use some more information from you about the analytical methods and the backstory around the plant.

If you have time to take a look tomorrow and get me something by Thursday morning, that would be great. If not, that's fine too.

Thanks.

Jane
