Subject: Craft Turney WSC Do Not Use

Good afternoon,

We are working on lifting the **do not use** ban for the connections (~500) in the expanded area. All sample results for this area have come back ok. Our folks in Toxicology reviewed the results. Kelly Cook shared the results with our partners at DSHS and they are good as well.

With regard to the area nearest the source (~11 connections) we are still waiting on results for samples taken on 10/11 for chlorothalonil. The good news for area nearest the source is that the EPA samples came back non-detect for Methylene bis-thiocyanate. The **do not use ban** for these 11 connections will remain in place until the 10/11 results are available.

Additionally, the WSC has instituted controls for the lumbermill including the installation of backflow prevention devices. Kenny with our Office of Water observed the successful testing of the devices today. The Region has installed pressure recorders at two locations near the lumbermill to document any decreases in pressure due to the hydrant. The WSC is working on a more long-term solution.

We are working on a press release to be issued today. The Region is working on an email to the WSC to let them know we are good with lifting the ban, and based upon the low usage of the showers, we are going to de-mobilize the showers tomorrow. We understand churches are still providing showers and we are providing drinking water as necessary.

-Ramiro
