Subject: FW: Update fact sheet for Monarch
Attachments: Monarch HMI Waste Incinerator Briefing Sheet 061517.docx; ATT00001.htm

Can we discuss this on Monday? ORC needs to get a better understanding of what is going on with this. Heard there are air permitting and waste storage issues.

> I spoke with 6MM today and have updated the fact sheet to reflect the latest developments. Here are some additional details.

By staring up the hospital/medical/infectious waste incinerator, Monarch triggered two key areas of the CAA – NSPS Subpart Ec and Title V.

NSPS Subpart Ec:
MWT has 60 days to reach maximum capacity for conducting a performance test, and must conduct the performance test no later than 180 days after startup.

Ex. 5 Deliberative Process (DP)

Please let me know if you have any questions. I'm off on Friday but will monitor email.
