SISTERSVILLE PLANT

MEMORANDUM

TO: TM Bossick
CF Schubert
RF Kramer
JE McDermott

DATE: 5/3/81

SUBJECT: Conversations with USEPA concerning the production of Phenyl trichloro silane and PCBs.

TICKLE:

ACTION REQUIRED: YES NO

COMPLETION DATE:

FROM: Fred Dailey

I provided the following information to Scott McPhillips

1) From 1956 to 1962 we made ~~Phenyl~~ Phenyl trichloro silanes (PTS)

2) Our experts feel we ~~[illegible]~~ did not make any PCBs because of technique used and no Cl available to attack Benzene (made trichloro 1st then added Phenyl group?)

3) We have sampled inactive landfill sites and found no PBC at levels above the detection limit

4) Products were made prior to 1975 using PTS. Experts feel no PCB were generated.

5) PTS were purchased (from a Competitor) in 1978 to make Phenyl tri ethoxy silane (for Competitor) - done under contract

6) Analysis of ~~waste water~~ from process streams: Landfill leachate + process units showed no PCBs

EPA003638

7) WE PRESENTLY ARE STORING 12-15 CAPACITORS (PCB) ~~THAT ARE USEABLE~~

8) WE HAVE 1 PCB transformer > 50ppm (99ppm)
50-60 Capacitors with PCBs } presently IN USE
