Just curious Keith.

Was it wind speed or was it storms that shut them down?

Subject: March 23rd ambient lead data

Attached is the March 23rd ambient lead monitoring data for the Frisco area. The monitor with the highest reading was the Stonebrook monitor, with a reading of 0.00574 micrograms per cubic meter. The wind speed was between 2.0 to 11.0 miles per hour, with a maximum wind gust of 21.7 mph. The wind direction was mainly from the North-by-east to East-by-south, with a few hourly spikes with the wind direction coming from the North.

On March 23rd, Exide and its contractors were conducting decontamination and demolition activities at the site. However, due to weather conditions the work hours were from 7:00 a.m. to 7:50 a.m. Lead/cadmium sampling was not conducted on this day.
