Lower 8 Mile Action

Final Remedial Investigation Report and Focused Feasibility Study [February 2014]

The Remedial Investigation Report (RI) describes the nature and extent of contamination in the sediments of the lower 8 miles of the Lower Passaic River and the risks to human health and the environment posed by exposure to that contamination. The Focused Feasibility Study (FFS) evaluates a range options to clean up the contaminated sediments in the lower 8 miles (called remedial alternatives). The files that are part of the RI and FFS can be downloaded and reviewed by clicking on the links below:

Remedial Investigation Report (RI Report)

Focused Feasibility Study Report (FFS Report)

Appendix A (Data Evaluation Reports)

Appendix B (Modeling):

- Part 1 of 3 (Hydrodynamic)
- Part 2 of 3 (Sediment Transport)
- Part 3 of 3 (Contaminant Fate & Transport)

Appendix C (Mass Balance Modeling Analysis)

Appendix D (Risk Assessment)

Appendix E (Preliminary Remediation Goals)

Appendix F (Engineering Evaluations)

Appendix G (Dredged Material Management Assessments)

Appendix H (Cost Estimates)

The RI and FFS provide information that supports the Proposed Plan, described and available for download on the “Home” page.
