Subject: Question about Lower Passaic River Restoration project,

Hello Alice Yeh,
I am a graduate student at NJIT, I am working on a project (in which we have to analyze the evaluation process for an infrastructure project. My group decided to do our project on the Passaic River clean up (specifically the diamond alkali site). I looked online for a tradition

My name is Muhammad Khan, I am a graduate student at NJIT. For my Critical Infrastructure class, we have to analyze the evaluation process for an infrastructure project. My group decided to analyze Phase 1 of the Passaic River Cleanup (the Diamond Alkali site). I was able to find a comparison of the four alternatives proposed but I was not able to find a traditional BCA (Benefit Cost Analysis). I know this specific project is a "non time critical removal action" (NTCRA). I just wanted to ask you why? How was this project classified as a NTCRA? If you could provide me some information or point me towards the right document that would be great. Also, was a typical BCA performed?

Thanks,
Muhammad
