CPG Concerns:

① # of samples
- enough points to be representative
- capture radius of each sampling point

② Response:
~20 locations (10-30)
Sampling years 1 to 3 or 5, then trail off

✓ - Take few porewater samples in no-dredge zone

- Include dioxin, PCBs, probably PAHs
mercury will be difficult

- Depths - every 4"?
sediment/cap interface, top of active layer, cap/water interface

- post-dredge sediment sampling ≤20 locations
→ to help inform future actions, maybe won't be necessary for future targeted areas
