Subject: 7CC sampling

Ricardi:

As per your request, additional copper pipe replacement and subsequent water sampling was conducted at 7CC in July 2017. The water from all ten sampling points are now below the EPA action level of 1.3 mg/L. Please let me know if there are additional requirements for the 7CC water system as directed by the EPA.

I have attached a summary letter, all chemical reports, and a summary table for your review.

Sincerely,

Kristen Burgess
