Subject: Army Creek Landfill Work Plan - Response to OASQA Comment 12

Mike and Mike,

After further consideration of the memo I emailed to you yesterday, I spoke with an OASQA chemist today. Since the concentrations of PFOA and PFOS in groundwater samples are generally high compared with EPA's Drinking Water Health Advisory and because the environmental sample to field blank ratio is expected to reasonably low (it was less than 5 to 1 for the 2016 sampling event), EPA finds ACPS and NCC response to OASQA comment 12 to be acceptable.

Debbie
