LA told me they've only permitted onshore for air purposes. Rob thinks the offshore portion would be EPA jurisdiction if it needed a permit.

Just checking…Jessica's email below sounds like she is going to set-up the meeting? I am guessing you would like for me to have a short project status prepared for Delfin? When I spoke to Brad yesterday, he mentioned that he reviewed the LDEQ action for LOOP and he believes the offshore portion is within the LA state offshore boundary and LDEQ permitted that part with the previous action. I have the files and will verify but I would guess this would not be something that would interest this group?

Hi Donald,

Thanks for the heads up. We will schedule a call in December and go from there. I know Viorica has given me a heads up about activity that is brewing in her region as well. Please come prepared to summarize the issues that you are seeing and some preliminary ideas of what we think we can do to move forward. One pagers ahead of calls help us out a lot too.

Jessica

Subject: Need to regather the OCS workgroup

Hi Jessica, I am hoping you can reconvene the OCS workgroup and set up a call next month. There is a flurry of activity these days in building wind farms on the outer continental shelf. An issue has come up as to whether EPA (or its delegated state) needs to issue a CAA permit very early on in the process in order for the project owner's to install weather gathering devices. We should discuss this issue and come to a consensus. I understand the group grappled with this issue several years ago but I think things have changed and the technology may be different.
