LA is checking, but like you said they most likely only permitted onshore. I don't know what the potential emission profile would look like for an oil import/export ship and its associated equipment. Obviously would be different than LNG export/import. It may not trigger PSD permitting since there is no conversion/compression process.

LDEQ has permitted the onshore facilities. The question is about the marine terminal 17 miles offshore where the oil tankers hook up to (currently) discharge crude imports and would under the reverse flow concept take on crude export shipments.

I'll call Bryan Johnston today at LDEQ. I assume LDEQ would have issued the permit?

Melanie – thanks for the research. I was able to open / convert the files. Two are directly related to the NPDES permit. The other (note to file, I guess) was a response to David Garcia (air enforcement branch at the time) from Stephanie. It is pretty vague noting that LOOP had not submitted an air permit application but they probably should. It is still unclear to me why they don't have a permit from the late 70s (started operating in 80 or 81).

For the record, I have attached the Word format versions.

We don't have wordperfect so I am not sure if the attached files are what you are looking for. If Tina or William can convert the files, I may have information for you.

I am so sorry to ask but I have this old word perfect file that we really need to see in word or pdf. Rob Lawrence is asking if we have a loop permit and the attached file name looks like something he needs. I understand OGC/ORC still has wordperfect?

Thanks, Melanie
