Paraphrasing a wise quote, "the woman givith, the woman taketh away. Blessed be the name of the woman!" Well, I guess the honors of being the first to take away should go to the person who most likely was the first to give. How does it feel to be so powerful? Ha!

That will be fine. As you need/can.

Yes I do. I don't know what the GHG PSD Rescission workload demand is going to be so maybe we need to work together? I may not get to dive in as deep as I would like to.

Thanks Melanie,

Yep, that does help. If you see it again, just move it to the Louisiana folder, otherwise, I can dig it up later.

The project I have for your review, if you choose to accept it, is Loop LLC, Port Complex. This

is an off-again, on-again project that I wondered why they did not trigger PSD back in 2011. It is an initial PSD but a modification of an existing Title V also. The files, including the application file from 2011, are located here: H:\6PD\6PD-R\LDEQ\Permit Reviews\4634 LOOP llc Port Complex

The project went to notice on 6/17 so I was targeting its review to end by the end of July. Want to play?

I was looking for a texas permit and noticed in the GHG folder, GHG 2012 subfolder, there is a LDEQ permit from 7/22/14 (Graphic Packaging International).

I overheard a few parts of your conversation with Tim yesterday and I wanted to let you know incase this has to do with the mailbox permissions and if you are looking for the file.
