ssRL - Sample Specific Reporting Limit
U - results have been reported if present at or above the listed ssRL
J - values greater than ssRL but less than the PQL (3 x ssRL)
D - secondary dilution performed
Q - surrogate recovery limit exceedance
I - matrix interference
NC - not calibrated

Comment: Chenette, Eduard:

RW said lab analyst noted that the sample was too aqueous. She will check and verify why they were so different

* Well located outside of the SEE TTZ.
** ST012-UWBZ31 well is located outside of the SEE TTZ, however, some heating of the area may have occurred from the LSZ heating below.
*** Analytical results received for SEE TTZ were quantified as relative percent area method by GC/MS.
[1] Extra bottles shipped and labeled ST012-LSZ17 but were not indicated on chain of custody. Analyzed but mislabeling is suspected.

* ST012-UWBZ31 wellll located close enough to SEE zone to capture SEE-related activities

Biodegradation Ratios

(*iso*-paraffins+naphthenes)/*n*-paraffins

Gives us an approximation of the magnitude of biological alteration ("biodegradation"). Normally ranges from about 2 to 10 in fresh gasoline. The ratio increases as biodegradation proceeds because the *iso*-paraffins and naphthenes (*cyclo*-alkanes) are more resistant to biological alteration compared to the *n*-paraffins.

Biodegradation Ratios (Cont'd)

Methyl-*cyclo*-hexane/*n*-C_7 (n-heptane)

Normally, around 0.5 to 2.0 in fresh gasoline, but can vary. The ratio increases as biodegradation proceeds because methyl-*cyclo*-hexane is more resistant to biological alteration compared to *n*-heptane.
