Are you shipping it via air?

Justin,

Can you read the email thread below? I need to ship out some haz materials and I've heard you are certified for this. I've added all the attachments that are referenced.

Thanks

Adam,

I am no longer certified to ship hazardous materials, but Justin Young is now certified. Can you check with him about shipping the materials.

Jerry

Jerry,

I have a few vials of hazardous material to ship out to a lab in West Virginia. I was planning on shipping these items through Susan Shinn but she has been out all week. There is some urgency to get this shipped out and I was wondering if you would be able to help me out here.

I've attached MSDSs for the three materials I need to ship below. The materials are neat MCHM, neat PPH, and neat Crude MCHM. I am shipping ~2mL of each substance.

I've already boxed up the shipment in a box with a red label that I think is related to hazardous material. I've attached a scan of the label below as well.

Would you be able to ship out this material?

Thanks

Susan,

It looks like we need to ship another set of standards. We will need to ship the neat MCHM and crude MCHM just like last time but now we will be adding an additional standard called "PPH".

I've attached MSDS's for PPH, Neat MCHM, and Crude MCHM.

I've just received some unrelated analytical standards from a company called "Accustandard." I'm going to ship the material using the box that I received from Accustandard. The box has a red warning sticker that looks like its related to hazardous transport. I've attached a scan of that label. Should I keep this label on or remove it?

I'm going to ship out 2mL of each substance and wrap it up the same way we did the last shipment.

I also have a UPS account and I can print labels. Can I print a label from my account or do you need to print a special label because this is hazardous material?

If we have enough to send both MCHM and PPh then send both. Priority is MCHM.
