Subject: FW: Question from Bop P thru Phil M regarding the recent West Virginia Chemical Spill

Kevin – see David's language below. Some of it may be useful for the paragraph that you're working on.

Subject: RE: Question from Bop P thru Phil M regarding the recent West Virginia Chemical Spill

Eric, from WSD, I think we'd only have a modest contribution to this question. Most of the actual information that would assist water systems would be derived from EPCRA, TRI, 112(r), etc., which could provide the local community with data on the types and location of chemicals upstream from an intake (or a permeable GW source) Ex. 5 - Deliberative

Ex. 5 - Deliberative

Where WSD's offerings come into play is linking these water systems to the LEPCs and state emergency response programs which would likely be the only recipients of these data (not the water systems directly). Of course, WSD also provides tools and training on emergency preparedness which would enable these systems to (1) forge critical relationships with emergency responders (LEPCs etc.) and other key players in the community prior to an event, (2) have SOPs in place to detect and respond quickly to contamination events, (3) consider emergency sources of alternative water supplies (bottled water, interconnects etc.), (4) update a risk assessment to identify the threat of contamination, and (5) develop laboratory support internal and external to the utility for sampling and analysis.

My quick assessment. I'm happy to meet tomorrow if it's warranted.

Subject: Question from Bop P thru Phil M regarding the recent West Virginia Chemical Spill

Phil M just stopped over and asked for the OGWDW input to respond to a question from Bob P regarding the WV spill. Basically – Bob is asking "What processes under federal programs delivers or develops the information that would be necessary to be better prepared and to take action ahead of the problem?" I've attached the email from Bob P to several of the AAs in the Agency that is seeking that perspective regarding the dw industry's preparedness related to incidents such the WV indiscretion. Can you all pull something together or do we want to sit down tomorrow and discuss?? I'm sure that we'll have to give a formal response or interact with the other parts of the Agency (OSWER, OHR, etc.) to respond to the Agency.
