Hi Monty,

It looks like it is still there. Did you mean to include page 35? It looks like internal tracking.

Thanks,
Emily

Hi Dan,

Please find replacement removing the error.

Thanks
Monty

Monty, the last page seems to be a list of some kind that was added in error. It that is not intentionally there, can it be removed and resent? You would have to make it fast.

Thanks,
Dan

Hi Dan,

Thanks for whatever you can do. I self-certify the only change was the insertion of the yellow sentence if that helps.

Monty

It seems to already be on it's way and in QA/QC, but we're trying to see if we can still swap. We do have to run a check to make sure nothing else got inadvertently changed though. We're trying.

Hi Dan and Meg,

Please find revised label attached....only adds the yellow sentence. No other changes have been made.

Thanks
Monty

Monty, are you talking about the BLT language, or the regular label? There's a difference in this case.

Hi Meg,

Is it too late to add a missing sentence in our label show in highlight

Planted agricultural fields containing asparagus, corn, DT cotton, DT soybeans, sorghum, proso millet, small grains, sugarcane and other crops approved for postemergence dicamba use. If the applicator intends to include such crops as dicamba tolerant cotton and/or dicamba tolerant soybeans in the buffer distance calculation, the applicator must confirm the crops are in fact dicamba tolerant

We can get that to you very quickly but don't want to delay approval

Monty

Hello Meg,

Syngenta concurs with the indicated language in the email below.

With Best Regards,
Monty

Dear George:
EPA requests concurrence asap with the following language regarding hooded sprayers for BLT language associated with the dicamba decision:

"To protect federally listed threatened and endangered species, both a 310-foot in-field wind-directional spray drift buffer and a 57-foot omnidirectional in-field buffer are required. **If applying with a qualified hooded sprayer**, both a 240-foot in-field wind-directional spray drift buffer and a 57-foot omnidirectional in-field buffer are required to protect federally listed threatened and endangered species. Please see **[URL]** for a list of qualified hooded sprayers.

The following areas may be included in the buffer distance composition when directly adjacent to the treated field edges:
• Roads, paved or gravel surfaces, mowed grassy areas adjacent to field, and areas of bare ground from recent plowing or grading that are contiguous with the treated field.
• Planted agricultural fields containing dicamba-resistant plantings of cotton and soybeans.
• Areas covered by the footprint of a building, silo, or other man made structure with walls and or roof."

Thank you,

Margaret Hathaway (Meg)
