Rob Ford 8/8/2017 Lederer Ford

→ Overburden transmissivity is ~~[illegible]~~ calibrated poorly; the bedrock isn't that transmissivity as high as is claimed.

→ Full containment scenario
Surface barrier
Modell claimed by PRB filing
→ 1/2 of water will still occur with a phasial hydraulic / barrier which eliminates all physical barriers unfairly.

deep soil mixing
→ getting reactants into aquifer.
→ used to put hydraulic barriers
→ huge augers intwining grout or granular material.

• → interim cap - could be worthwhile will adress contaminants while

• → INTERIM REMEDIAL ACTION (IRM) DID

• → IF PRB IS INSTALLED WILL ENCOURAGE MOBILIZATION & THEN THEREAFTER

WITH PLUG SELECTIVELY, MAY FOCUSSED AREAS OF FLOW, CONSTRUCTIBILITY WB A BIG ISSUE.
