Good Morning Lis. In all likelihood, once EPA signs a Record of Decision (ROD) for this site, we will negotiate a Consent Decree with the responsible party. Then, that party will perform the remedy.

If you'd like to contact them once we sign a ROD, you can send an e-mail to

John M. Hoffman of Ashland. His e-mail is jmhoffman@ashland.com.

Please do not state or imply that I recommended or in any way suggested that he should use your company.

Thanks, jon

Subject: Hi Jonathan!

Good Morning Jonathan,
I receive EPA updates and saw you are listed as a point of contact. I just thought you should be aware of DeWind. We are a specialty construction company that specializes in the installation of groundwater control, collection, and containment using our custom built Deep One-Pass Trenchers (slurry walls, prb walls, groundwater/product recovery trenches...)

Have a wonderful weekend! :)

DeWind One-Pass Trenching is the Leader in Deep Trenching Technology:

Our technology allows us to install groundwater control/remedial systems underground, under the

water table and IN A SINGLE PASS without the need to pump, treat, shore, or dig mass excavations. You will not find these one-of-a-kind machines anywhere else. DeWind designs, builds, and operates these Deep One-Pass Trenchers. We have been in business 25+ years and work all over North America.

Examples:

- In-situ mixed slurry walls up to 75+ feet deep
- Groundwater/product recovery trenches up to 40+ feet deep
- PRB walls up to 40+ feet deep

*** Installation Rates: Hundreds of Feet Per Day ***

Also, you may want to check out our website, there is a lot of helpful information: Installation options, capabilities, pictures, and even animated videos (show how our machines work and what is happening below).
