March 27

Chris: conducting an entry into apartment into lower unit of building J. If all goes well, sampling will be done today. That will conclude sampling.
Prelim results for some upper unit. See all 3 canisters & 1 ppm of methyl bromide.
Msds sheets. If 1 ppm in work place, enter with level B. After this mish tie.
lots of time passed. Geoff spoke to UVI about storing the cylinder. Very close to a student population but using a secure container. ~~[illegible]~~ Needs to be ventilated + not locked into an air tight box.
Currently in terminal storage facility. Under lock in key by CID.
Pat Hick: trying to pay to have it packed + transported. No optimal location for storage.
Eric Mosher secured the $. He spoke to CID in hq. I have $ for St Thomas + St Croix canisters.
Bring to storage facility until CID is done with them.
Eric has an estimate of what was left in the cylinder. CID wants a sample.

Chris Jimenez: coordination activities. ATSDR. Getting info on people who were stg in the apt complex.
disposal activities. cost estimates.
Formal request to ATSDR. What types of questions. What our end point is on the data.
acute vs long term.

Novisky staff + maintenance staff. at the complex.
