Subject:	Priority 15-Day Report 47-MON-17 (18 Field Workers Transplanting Celery; Possible Methomyl Exposure; All Sought Medical Attention)
Date:	Monday, July 10, 2017 12:16:13 PM
Attachments:	47-MON-17 Priority 15-Day Report.pdf

UPDATE:

• All crew members have been interviewed and clothing samples collected; out of the 18 field workers, only one stated that he has not had any pesticide-related symptoms • CIMIS weather stations' data has been queried for wind/wind direction information, showing wind direction towards the crew • Some crew members were asked to transport other crew members to the hospital (in their personal vehicles). • All 18 were released to return to work the following day. Clothing samples are expected to be sent to the CDFA lab in Sacramento by July 17th. This investigation is currently ongoing.
