Subject:	53-SCR-17 Priority 15 Day Report: 6 raspberry harveters developed symptoms
Date:	Monday, July 24, 2017 3:45:07 PM
Attachments:	53-SCR-17 15-Day Report.pdf

On July 5, 2017 two crews of approximately 60(+) field workers were harvesting raspberries in hoop houses when they noticed a pesticide odor. Six field workers developed symptoms and obtained medical attention. An adjacent pesticide application to lettuce had been completed one hour prior to the harvesting crews arriving at the raspberry hoop houses.
