On July 21, the Fresno County Agricultural Commissioner's (CAC) office received a complaint of pesticide drift to a residence located in Sanger, CA. A family of 2 adults and 5 children returned to their home around 1:00 am and noticed a chemical odor and fog inside their residence. They turned on the all house fan and sprayed air freshener before retiring for the night. The next morning the family experienced symptoms that included coughing, nausea, vomiting, headaches and nasal irritation. The investigation revealed that a ground application of FujiMite was made to an adjacent vineyard. Fresno CAC is continuing to investigate the incident.
