4/22/16

Dave

- Talked to Bullseye today
- Layed out concerns.
- They immediately went to outlet
- They did not say requiring it but might be req'd downline by EPA or DEQ
- Eric Durrin seemed like he'd been thinking about it.
- Said ~~[illegible]~~ modify test plan for any changes.

- Another issue about test → pulse jet baghouse, ~~[illegible]~~ inlet can have backflow during pause. Pause inlet testing. So don't skew inlet.

- Forcasted the source test failure to them

- Keith Johnson is point of contact for Bullseye and Uroboros
  ↳ he will send email.
