Lehigh

- Rail ~~yard~~ car unloading is pretty dusty.
- Being blown straight to daycare.
- Takes an hour & a half. They don't usually watch. Does in puffs.
- operator was very concerned going right to daycare.

- Truck loading looked better controls & less dust.
- Ground clinker. Very fine.
- All they do is take from rail & put on trucks.
- Trucks take to ready mix plant.
- Terminal for cement powder.
- Reducing dust → Guy said they would try to build something.
  ↳ use a foam now but will try to build something better.
  They will have to experiment

Pictures for Rob on onedrive

This winter & spring → wet & rainy → somewhat recently, really bad ~~[illegible]~~ the rail yard was doing a deep soil mixing project, w/ cement, like foundation building. He says not doing but were repaving & bldg.
Huge clouds of cement dust.
Locamotive idling.

~~Rar~~ Brookly Railyard Records
→ ~~Apalling~~ Crazy how many engines are idled.
