Enforcement Confidential
le

- Mapco Settlement -

8/1/88
8/1/88

RFA was conducted on July 20th.

Specific Units -

sumps, lagoon, tank 192, boneyard.

Tank 192

- sent in analysis of sludge. -
- remove sludge.
- achieve clean closure.
-

Boneyard -

discussed random sampling vs. directed.

discussed groundwater well placement around surface lagoon + sumps.

tried to get as close to sumps with soil sample + water samples.

IMAGED

901 - underneath overhead piping most difficult to sample

overall concept for sumps looks adequate.

constituents to analyze for.
sodium hydroxide
radco corrosion inhibitor
BTX.

what is standard. -
standard for methylene chloride.
can make demonstration ie ACL or MCL.

3013 investigation vs state order.

RFA - identified releases requiring further action.

not going to interfere with state action.

want to limit constitutent sampling for at sump + surface impoundment

2 of four unit have BTEX.
product or groundwater.
dissolved benzene in groundwater.
want to look for chlorinated solvents.
look at facility boundary.

can we allow this?

inability to show that there hasn't been a release

~~one state~~ one region has incorporated a states order for cleanup as part of it agreement.

Randy ~~comes~~ will be in Friday

Need until 1990 to clean up sump. –

Give them a copy of model (A) order –

End of August. –

End of September final document signed. –
