Maurice Phillips - SECOR work
7 June 1999

Injection well area - Maurice felt like the contractor dug in the wrong place to take the Soil Samples. She identified a pipeline which was probably the end of the discharge line farther east. In the place the Contractor took soil samples, it appeared to be clean.

Excavated Soil - Maurice has told me that she has heard Unconfirmed information that the PCS being sent to the landfarm are at ND levels.

Conf call patch on 8 June 1:00 MST (10:00 Pacific). Maurice will call Hillary at his desk.
