Powder Mill call w/ Senator Shaheen + Town of New Durham
office

7.11.2018

Attendees:

EPA	TOWN	Shaheen	NHF&G
Kelsey	Scott Kinmond	Peter Clark	Jason Smith
Damien	David Swinson		
Me	Fred Quimby		

Issued in 2011
Letter Fall 2016
Dec 2017 → Hatchery Monitor Freq
Sum - Dec 2017

Draft - end of calendar year

DS (- unduly long via DS
- end of July Aug

David - Selectman chair
current situation → unduly harming long term planning process to mitigate issue

unacceptable because want to advocate for funding from town to remediate

officially ask that we move permit to mid-August
(Damien - doesnt work within reg timeline even if draft issued tomorrow)

DS → Draft will at least identify a conceptual target on which they can begin to plan & allocate funds

DS ↘
Follow up - Is it correct that no WW ideas or Δs w/o formal approval
| yes - Think you can Δ the BMP plan outside of the permit
if something were re-piped that might be an issue

Peter - If there was a list of ideas can we send them to EPA

Fred → waste vaccuumed & put in settling pond
Sugg → immediate land application

~~[illegible]~~

Why not an ecoregional criteria? — Fred

If it exists why not use it?

understand there would be a compliance schedule

— "we need to know what that number is going to be?"

Scott → keep in mind dont want to be in a battle with F&G but work together to resolve this

coordinating now with Town of Alton ~ downstream users
↳ in working group

want to work with EPA to come up with a solution that works for all.

impaired waterways dont help economic dvlpmnt in community

Hatchery Jason - understand that they may require to make a capital improvement but not sure if advocating for funding without knowing what the outcome will be is best path forward
