STATE WATER RESOURCES CONTROL BOARD
ORDER NO. WQ 2019-0037-EXEC
AS AMENDED ON JANUARY 14, 2020

AMENDING MONITORING AND REPORTING PROGRAMS
FOR
WASTE DISCHARGE REQUIREMENTS, NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM PERMITS, WATER RECLAMATION REQUIREMENTS, MASTER RECYCLING PERMITS, AND GENERAL WASTE DISCHARGE REQUIREMENTS

The California State Water Resources Control Board (hereafter, State Water Board) finds:

1. The State Water Board and regional water quality control boards (hereafter, regional water board(s) and collectively, Water Boards) are authorized to prescribe waste discharge requirements (WDRs) pursuant to Water Code section 13263, general WDRs pursuant to Water Code section 13263(i), water reclamation requirements (WRRs) pursuant to Water Code section 13523, master recycling permits pursuant to Water Code section 13523.1, and National Pollutant Discharge Elimination System (NPDES) permits pursuant to Water Code section 13377. For the purposes of this Order, permittees under these permits are hereby referred to as Dischargers.

2. The Open and Transparent Water Data Act, AB 1755 of 2016 requires the State Water Board to improve access to water data by creating a statewide information system to integrate critical water data in a user friendly, publicly accessible website to simplify and expedite decision-making.

3. On March 7, 2017, the State Water Board adopted Resolution No. 2017-0012, Comprehensive Response to Climate Change. Resolution No. 2017-0012 directs staff to coordinate with the regional water quality control boards to make annual reporting of recycled water data a requirement of waste discharge permits and water reclamation requirements, and to develop an online data entry system to track recycled water use.

4. On July 10, 2018, the State Water Board adopted Resolution No. 2018-0032, adopting principles of open data as a core value and directing programs and activities to implement strategic actions to improve data accessibility and associated innovation. Resolution No. 2018-0032 directs staff to follow the core principles for open data including making all critical public data available in machine readable datasets and using data to make decisions in the best interest of the Water Boards mission.

ED_006495_00002011-00001

5. On December 11, 2018, the State Water Board adopted Resolution No. 2018-0057, amending the Water Quality Control Policy for Recycled Water (Recycled Water Policy). Resolution No. 2018-0057 directs the State Water Board Executive Director to issue orders pursuant to Water Code section 13267 and Water Code section 13383 to implement the monitoring requirements in the Recycled Water Policy.

6. The Recycled Water Policy contains goals to increase the use of recycled water from 714,000 acre-feet per year in 2015 to 1.5 million acre-feet per year by 2020 and to 2.5 million acre-feet per year by 2030.

7. Water Code section 13383(a) provides that "the state board or a regional board may establish monitoring, inspection, entry, reporting, and recordkeeping requirements, as authorized by Section 13160 , 13376 , or 13377 or by subdivisions (b) and (c) of this section, for any person who discharges, or proposes to discharge, to navigable waters . . ." Point source discharges to navigable waters are subject to NPDES permit requirements.

8. Water Code section 13267(b), provides that "a regional board may require any person who has discharged, discharges, or is suspected of having discharged or discharging, or who proposes to discharge waste within its region... or is suspected of having discharged or discharging, or who proposes to discharge, waste outside of its region that could affect the quality of water within its region shall furnish, under penalty of perjury, technical or monitoring reports which the regional board requires... In requiring those reports, the regional board shall provide the person with a written explanation with regard to the need for the reports and shall identify the evidence that supports requiring that person to provide the reports."

9. The recycled water tracking requirements in this Order may have associated costs for the Dischargers' staff time required to compile and submit the required information. Monthly data collection is not expected to be burdensome since volumetric data may be calculated based on flow, a metric that facilities commonly use and monitor. The costs associated with the requirements in this Order are estimated to be solely associated with the Dischargers' staff time required to compile the required information and submit it to the State Water Board. These costs are estimated to be reasonable based on the assumption that the requirements in this Order would require less than 50 hours annually.

10. Water Code section 13267(b) further specifies that the burden, including costs, of these reports must bear a reasonable relationship to the State Water Board's need for the reports and the benefits to be obtained from the reports. The cost of the technical reports bears a reasonable relationship to the benefit to be gained because the reports will capture volumetric trends that will help the State Water Board identify potential opportunities for increased water recycling in California. The data submitted in the annual reports will be made publicly available to improve the effectiveness and efficiency of Water Boards programs and statewide water planning efforts, improve public trust, facilitate conversations with stakeholders, and encourage public participation.

11. Water Code section 13267(f) authorizes the State Water Board to carry out the authority granted to the regional board if it consults with the regional water quality control boards and determines that it will not duplicate the efforts of the regional water quality control boards. The State Water Board has consulted with the regional water quality control boards and made this determination.

12. In order to establish a realistic estimate of statewide recycled water use and potential for increased recycled water use statewide, the Recycled Water Policy requires Dischargers to report the volume of treated wastewater and recycled water. Section 3 of the Recycled Water Policy requires wastewater and recycled water Dischargers to annually report monthly volumes of influent, wastewater produced, and effluent, including treatment level and discharge type. The Recycled Water Policy also requires Dischargers to annually report recycled water use by volume and category of reuse.

13. Annual reporting is necessary to evaluate progress towards the recycled water goals in the Recycled Water Policy and evaluate the need to update the recycled water goals in the future based on consistent statewide data. The annual report will meet implementation needs of the Recycled Water Policy and fulfill data gaps for additional statewide water planning efforts. The burden and cost of preparing the reports is reasonable and consistent with the interest of the state in maintaining water quality and developing alternative water supplies to increase water resiliency.

14. Technical and monitoring reports specified in this Order are required. Failing to furnish the reports by the due date or falsifying information in the reports are misdemeanors and may result in assessment of civil liabilities against the Discharger.

15. This Order does not preempt or supersede the authority of federal, state, or local governmental agencies to prohibit, restrict, or control discharges of waste subject to their jurisdiction.

16. This Order will be in effect for each Discharger until the applicable regional water quality control board reissues or otherwise amends the Discharger's monitoring and reporting program to incorporate the requirements of this Order, at which time this Order will no longer be applicable to that Discharger.

ED_006495_00002011-00003

IT IS HEREBY ORDERED THAT pursuant to Water Code section 13383 for Dischargers subject to NPDES permits and Water Code section 13267 for Dischargers subject to WDRs, general WDRs, WRRs, and master recycling permits:

1. Monitoring and reporting programs are amended to include the reporting provisions in Attachment I for all Dischargers listed in Attachment II.

2. Dischargers shall continue to comply with all existing permit and monitoring and reporting program provisions, with the exception of provisions of this Order addressing reuse volume reporting, which shall supersede existing reuse volume reporting.

3. This Order will have no further force or effect after all of the applicable regional water quality control boards have reissued or otherwise amended all the monitoring and reporting programs for the Dischargers listed in Attachment II to incorporate the requirements of this Order and all provisions of Attachment I.

1/14/2020

Date

Eileen Sobeck
Executive Director

ED_006495_00002011-00004

ATTACHMENT I – MONITORING AND REPORTING PROGRAM

1) ANNUAL REPORTING

Dischargers shall submit an annual report to the State Water Board by April 30 of each calendar year furnished with the information detailed in section 2 of this monitoring and reporting program (MRP). For calendar year 2019, data shall be reported for the months January through December. The Discharger must submit this annual report containing monthly data in electronic format via the State Water Board's Internet GeoTracker system at http://geotracker.waterboards.ca.gov/ as required by this MRP. Required data shall be submitted to the GeoTracker database under a site-specific global identification number. Any data will be made publicly accessible as machine readable datasets. Dischargers shall continue to comply with all existing permit and MRP provisions, with the exception of provisions of this MRP addressing volume/reuse volume reporting, which shall supersede existing volume/reuse volume reporting where provisions are duplicative.

2) VOLUMETRIC MONITORING

Any Discharger subject to this MRP must report in accordance with each of the items in section 3 of the Recycled Water Policy as described below:

a) *Influent.*
Monthly volume of wastewater collected and treated by the wastewater treatment plant.

b) *Production.*
Monthly volume of wastewater treated, specifying level of treatment.

c) *Discharge.*
Monthly volume of treated wastewater discharged to each of the following, specifying level of treatment:

1) Inland surface waters, specifying volume required to maintain minimum instream flow.

2) Enclosed bays, estuaries and coastal lagoons, and ocean waters.

3) Natural systems, such as wetlands, wildlife habitats, and duck clubs, where augmentation or restoration has occurred, and that are not part of a wastewater treatment plant or water recycling treatment plant.

4) Underground injection wells, such as those classified by U.S. EPA's Underground Injection Control Program, excluding groundwater recharge via subsurface application intended to reduce seawater intrusion into a coastal aquifer with a seawater interface.

ED_006495_00002011-00005

5) Land, where beneficial use is not taking place, including evaporation or percolation ponds, overland flow, or spray irrigation disposal, excluding pasture or fields with harvested crops.

d) *Reuse.*
Monthly volume of recycled water distributed.

e) *Reuse Categories.*
Annual volume of treated wastewater distributed for beneficial use in compliance with California Code of Regulations, title 22 in each of the use categories listed below:

1) Agricultural irrigation: pasture or crop irrigation.

2) Landscape irrigation: irrigation of parks, greenbelts, and playgrounds; school yards; athletic fields; cemeteries; residential landscaping, common areas; commercial landscaping; industrial landscaping; and freeway, highway, and street landscaping.

3) Golf course irrigation: irrigation of golf courses, including water used to maintain aesthetic impoundments within golf courses.

4) Commercial application: commercial facilities, business use (such as laundries and office buildings), car washes, retail nurseries, and appurtenant landscaping that is not separately metered.

5) Industrial application: manufacturing facilities, cooling towers, process water, and appurtenant landscaping that is not separately metered.

6) Geothermal energy production: augmentation of geothermal fields.

7) Other non-potable uses: including but not limited to dust control, flushing sewers, fire protection, fill stations, snow making, and recreational impoundments.

8) Groundwater recharge: the planned use of recycled water for replenishment of a groundwater basin or an aquifer that has been designated as a source of water supply for a public water system. Includes surface or subsurface application, except for seawater intrusion barrier use.

9) Seawater intrusion barrier: groundwater recharge via subsurface application intended to reduce seawater intrusion into a coastal aquifer with a seawater interface.

ED_006495_00002011-00006

10) Reservoir water augmentation: the planned placement of recycled water into a raw surface water reservoir used as a source of domestic drinking water supply for a public water system, as defined in section 116275 of the Health and Safety Code, or into a constructed system conveying water to such a reservoir (Water Code § 13561).

11) Raw water augmentation: the planned placement of recycled water into a system of pipelines or aqueducts that deliver raw water to a drinking water treatment plant that provides water to a public water system as defined in section 116275 of the Health and Safety Code (Water Code § 13561).

12) Other potable uses: both indirect and direct potable reuse other than for groundwater recharge, seawater intrusion barrier, reservoir water augmentation, or raw water augmentation.
