Subject: Orsted's OCS South Fork Wind Project breaks ground

This is copied from yesterday's EPA Daily News Clips; and two other sites with relevant information.

Ørsted Breaks Ground On South Fork Wind Project Offshore Long Island.

The Hill (2/15) reports Ørsted has broken ground on its South Fork Wind project offshore Long Island, New York. South Fork Wind is the state's first offshore wind development, with its 12 turbines intended to "generate enough power for roughly 70,000 homes on Long Island" once it comes online in 2023. New York Gov. Kathy Hochul (D) said the project is expected to eliminate more than six million tons of CO2 emissions over the next 25 years.
