Andy & Phil,

Good afternoon. Based on our follow up conversations and concurrence regarding the investigation of AOC 103, as well as our review of the EPA November 15, 2019 comment letter regarding the AOC 103 Site Investigation Workplan, Hess will initiate the investigation as quickly as possible and will not be submitting a revised workplan. We will address all comments in the final Site Investigation Report.

In addition, as requested in the comment letter, we will implement the following changes to the workplan:

- If air knife/vacuum extraction is used, the monitoring wells will be allowed to stabilize for 4 weeks after installation
- All analytes detected by modified method 537 will be reported for the groundwater samples

Hess will contact Buckeye directly to inform them that the NJDEP and EPA are expecting them to investigate their AFFF storage area. I will keep you notified of the communication between Hess and Buckeye regarding this investigation requirement.

We will keep you notified of the Hess (and Buckeye) field work schedule as it develops.

Thank you

Sincerely,

John Schenkewitz
