Zachery,
here is the Readers Proof of Appx. 2,
what I gave you a minute ago, were the queries, sorry 'bout that.

Talk w. you soon,

From: Huang, Zachary [huang@cns.msu.edu]

Tom and Dave,

I can only find an old copy (dated Jan 20, 2011) on my laptop here. I will try to see if my office computer has an more updated version.

Zachary

Zachary,
Do you happen to have a copy of this section I will look back at older versions, Dave, perhaps you can look through your files as well.

This concerns me since it sounds like it may be a significant change. We need to find the material you are talking about and see what the extent of change may be.

Let me know also whether there text in the current version that can be modified in some way to reflect the main points of the section you wrote earlier.

Tom,

For some reason I do not see the section I wrote here at all (the importance of measuring toxicity to brood).

Zachary Huang

Subject: SETAC - Pesticide Risk Assessment for Pollinators - Review of Final Draft of Hazard Lab Chapter

All,
It has been quite a while, but we are nearing the end of putting our SETAC Pellston effort from January 2011 to a close by getting the final proceedings into a book.

If you recall, we published the Executive Summary in 2012, following that, the co-leaders (co-leads for each chapter) began to draft the full chapters, and it took some time to get these together and into the hands of SETAC. Following that, SETAC inventoried the manuscript and then it went to Wiley.

Dave Fisher and I have worked with SETAC, Wiley and the co-leaders to go through what is called "queries" and now "readers proofs" to finalize each of the chapters of the book.

We are asking if you would like to review the attached final draft version of the Hazard-Laboratory Chapter (Chapter 8) of the SETAC Pellston effort on Pesticide Risk Assessment for Pollinators.

Dave and I have worked with Jim Frazier on the the attached draft to incorporate minor editorial changes, but also to revise the conclusion (now incorporated into the attached document).

Jim was clear, and Dave and I agreed that you should be provided a week of review time. However, Wiley and SETAC are aiming to put the book into print by May, and ready for the SETAC conference in same month. To do so means that we needed to get all the material to them by early next week. As it is, I need to ask you to give me comments by no later than COB Tuesday the 25th.

SETAC and Wiley will move forward with whatever version of Chapter 8 they have at that time.

With this in mind, and because this is a readers proof, Dave and I are asking that you review the chapter for principle agreement. That is, we are not seeking any word changes, only for you to let us know of any issues you may have with the text if (from what you recall from the 2011 Workshop), regarding important topics that have not been included, or if there are any gross inaccuracies.

I apologize for the tight turn-around.

If you have wish to speak to either Dave or I, please do not hesitate to contact us.

Kind regards,
Tom Moriarty - 703-305-5035
Dave Fischer - 919-549-2843
