Other Comments: Three acre inactive drum reconditioning facility. Ideal Cooperage began operations at the Jersey City location in 1952 and continued approx 28 years. Numerous investigations at the site by state and local authorities indicated that drum contents leaked to the ground surface. Enforcement actions by NJDEP include a 1988 Directive Letter which addresses the immediate remediation of problems resulting from the discharge of hazardous substances and the abandonment of chemical drums and containers at the site. Potential for GW, SW and Soil (observed) exist. There are no drinking water supplies within 4 miles of the site. DW comes from Boonton Reservoir located 25 miles away

Recommendation:
Final (By EPA)

Due to low HRS scores (Pre = 4.98, Pro = 5.27) NFRAP
Site is NJDEP Enforcement lead.
