Notes:

• The above listed water disposal injection wells fall into DOGGR's defined injection well category of: "Water disposal wells that are not specifically identified as part of a UIC "project." These are not specifically identified as enhanced oil recovery (EOR) wells, are not part of a "project" and the native water quality in the formation into which injection occurs is not readily known and could be less than 3,000 ppm TDS."

* Injection well API numbers highlighted in yellow are either injecting shallower than 1,500 feet or of unknown depth.

Each water supply well listed is within one-mile of one or more injection wells.

A water supply well may be listed twice (associated with more than one injection well).

There were not any water supply wells identified with a screened interval within 500 vertical feet of an injection interval.

• Well depth information for water supply wells in many cases is based on information obtained from a well completion report. In some cases, the well completion repor may not be the well's actual report and the depth information may not be correct.

• Identified water supply wells within the one-mile radius was based on a query of available information within the GeoTracker GAMA information system. In some ares, there may be many more water wells.

This is possible because no complete database exists for water supply wells, including domestic wells.
