RECEIVED, subject to the classifications and tariffs in effect on the date of the issue of this Bill of Lading, the property described above in apparent good order, except as noted (contents and condition of contents of packages unknown), marked, consigned, and destined as indicated above which said carrier (the word carrier being understood throughout this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery at said destination, if on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed as to each carrier of all or any of, said property over all or any portion of said route to destination and as to each party at any time interested in all or any of said property, that every service to be performed hereunder shall be subject to all the bill of lading terms and conditions in the governing classification on the date of shipment.
Shipper hereby certifies that he is familiar with all the bill of lading terms and conditions in the governing classification and the said terms and conditions are hereby agreed to by the shipper and accepted for himself and his assigns.

GENERATOR'S CERTIFICATION: I hereby declare that the contents of this consignment are fully and accurately described above by proper shipping name and are classified, packed, marked, and labeled, and are in all respects in proper condition for transport by highway according to applicable international and national government regulations, and applicable state laws and regulations.
I am a small quantity generator who has been exempted by statute or regulation from the duty to make a waste minimization certification under Section 3002(b) of RCRA. I hereby certify that I have a program in place to reduce the volume and toxicity of waste generated to the degree I have determined to be economically practicable and I have selected the method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment.

the property described below, in apparent good order, except as noted (contents and condition of contents of packages unknown), marked, consigned, and destined as indicated below, which said carrier (the word carrier being understood throughout this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery at said destination if on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed, as to each carrier of all or any of said property over all or any portion of said route to destination and as to each party at any time interested in all or any of said property, that every service to be performed hereunder shall be subject to all the terms and conditions of the Uniform Domestic Straight Bill of Lading set forth (1) in Official, Southern, Western and Illinois Freight Classifications in effect on the date hereof, if this is a rail or a rail water shipment, or (2) in the applicable motor carrier classification or tariff if this is a motor carrier shipment.

Shipper hereby certifies that he is familiar with all the terms and conditions of the said bill of lading, including those on the back thereof, set forth in the classification or tariff which governs the transportation of this shipment, and the said terms and conditions are hereby agreed to by the shipper and accepted for himself and his assigns.

5		[illegible]

The property described hereon, in apparent good order except as noted (contents and condition of contents of packages unknown), marked, consigned, and destined as indicated hereon, which said carrier (the [illegible] carrier being understood throughout this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery at said destination if on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed, as to each carrier of all or any of said property over all or any portion of said route to destination, and as to each party at any time interested in all or any of said property, that every service to be performed hereunder shall be subject to all the terms and conditions of the Uniform Domestic Straight Bill of Lading set forth (1) in Uniform Freight Classifications in effect on the date hereof, if this is a rail or a rail-water shipment, or (2) the applicable motor carrier classification or tariff if this is a motor shipment.

Shipper hereby certifies that he is familiar with all the terms and conditions of the said bill of lading including those on the back thereof, set forth in the classification or tariff which governs the transportation of this shipment, and the said terms and conditions are hereby agreed to by the shipper and accepted for himself and his assigns.

Subject to Section 7 of Conditions of applicable bill of lading, if this shipment is to be delivered to the consignee without recourse on the consignor, the consignor shall sign the following statement:
The carrier shall not make delivery of this shipment without payment of freight and all other lawful charges.

CONSIGNEE NO.
CARRIER
CARRIER'S NO.

RECEIVED, subject to the classifications and tariffs in effect on the date of the receipt by the carrier of the property described in the Original Bill of Lading,

AT [illegible] DATE FROM:

the property described below, in apparent good order, except as noted (contents and condition of contents of packages unknown), marked, consigned, and destined as indicated below, which said carrier (the word carrier being understood throughout this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery at said destination, if on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed, as to each carrier of all or any of said property over all or any portion of said route to destination, and as to each party at any time interested in all or any of said property, that every service to be performed hereunder shall be subject to all the terms and conditions of the Uniform Domestic Straight Bill of Lading set forth (1) in Uniform Freight Classifications in effect on the date hereof, if this is a rail or a rail water shipment, or (2) in the applicable motor carrier classification or tariff if this is a motor carrier shipment.

Shipper hereby certifies that he is familiar with all the terms and conditions of the said bill of lading, including those on the back thereof, set forth in the classification or tariff which governs the transportation of this shipment, and the said terms and conditions are hereby agreed to by the shipper and accepted for himself and his assigns.

DATA REPORT NOTICE

CompuChem employs Methods 624 and 625 for GC/MS analysis of organics in liquid matrices. These methods were proposed on December 3, 1979 by the U.S.E.P.A. in Volume 44 of the Federal Register. These methods were subsequently revised and reissued in July, 1982 as publication EPA-600/4-82-057. The EPA Environmental Monitoring and Support Laboratory (EMSL-Cincinnati) has subsequently issued method modifications which provide for the analysis of solid matrices. These modifications specify changes in the sample preparation procedures.

Additionally, for solid samples detection limits and any analytical results reported are based on processing the method specified sample size of as-received material.

The referenced methods are no longer appropriate for several of the original priority pollutant compounds. This is due to either the deletion from the toxic pollutant list (40 CFR Part 401) by EPA or the determination by EPA that the referenced methods may not be optimized for certain compounds (EPA-600/4-82-057) originally incorporated by the methods.

CompuChem® presents these compounds in its sample data report for completeness as many of the government compound list forms continue to display the affected compounds. For consistency, these compounds are reported as "BDL" or "Below Detection Limit" as they are either not likely to exist in the sample or are not likely to be detected by the method. Those compounds which have actually been deleted are listed below with the Federal Register deletion reference.

Compound Name	GC/MS Fraction	Federal Register	Date
Dichlorodifluoromethane	Volatile	46FR2264	1/8/81
*Trichlorofluoromethane	Volatile	46FR2264	1/8/81
Bis(Chloromethyl)Ether	Volatile	46FR10723	2/4/81

*While this compound has been deleted, CompuChem® continues to identify and quantitate for it.

SECTION A - GENERAL DESCRIPTION OF THE INDUSTRIAL ACTIVITY

Metro Container Corporation is a closed-head drum reconditioning plant which processes used 55-gallon steel drums for resale and/or disposal. Operations include unloading, paint stripping, label removal, cleaning, metal cleaning, phosphatizing, dedenting, shot blasting, leak testing, and painting per the process flow chart below:

Drums Unloaded → Drums Inspected → Drums Drained → Drums Pre-flushed And/or Chained → Exterior Paint Stripping/Cleaning (23% Caustic) →

Exterior Rinse → Chime Straightening → 1st Interior Cleaning (23% Caustic) → 2nd Interior Cleaning (23% Caustic) → 1st Interior Hot Rinse →

2nd Interior Hot Rinse → 1st Interior Metal Strip (28% HCl) → 2nd Interior Metal Strip (28% HCl) → 1st Cold Rinse → 2nd(Final) Cold Rinse →

Phosphatizing → Syphoning → Drying → Dedenting → Shot Blasting → Leak Testing →

Pre-drying → Painting → Baking → Warehouse → Loading

Waste products include solid waste [illegible], shot, shot blasting sludge, paper waste, DAF float filter cake waste, and waste oil primarily from refining operations.

Figure #1 is a 8½"x11" portion of a 7½ minute USGS map of the Marcus Hook, Pa-NJ-De SW/4 Chester 15 minute quadrangle showing the following:

(a) Location of the site and boundaries of the site.
(b) Location of surface drainage courses leading away from the site(Detailed in Figure #2) and major surface streams and tributaries near the site.
(c) Public/private groundwater supplies are not in the vicinity of the site.
(d) Public/private surface water intakes are downstream of the point where the BP Oil outfall/Stoney Creek joins the Delaware River. The intakes are used soley for industrial purposes such as cooling tower make-up, process water, etc as far as can be determined.

Figure #2 shows the following:

(a) A general layout of the site.
(b) Property boundaries.
(c) Areas occupied by manufacturing facilities.
(d) Raw materials storage.
(e) Loading and unloading areas.
(f) Waste handling, storage and treatment facilities.
(g) Drains/pipes which lead away from potential leak of spill areas.
(h) Outfall pipes which discharge to Stoney Creek/BP Oil outfall tributary.
(i) Secure and open access areas.
(j) Entrance and exit areas to the site.

ORIGINAL

SECTION B - DESCRIPTION OF EXISTING EMERGENCY RESPONSE PLAN(S).

An existing plan (PRCP) was submitted on June, 1982 which is currently in effect and will be superceeded by the PRC plan submitted herin. A copy of this plan is attached.

ORIGINAL (Red)

SECTION C - ORGANIZATIONAL STRUCTURE FOR IMPLEMENTATION OF PPC PLAN

The following personnel are listed according to duties assigned:

Duties	Personnel
(1) Materials inventory - Identification of materials and wastes	Peter Cabrey Steve Zubrin
(2) Identification of potential spill sources	Gardner Flynn
(3) Establishment of spill reporting procedures	Norman Backus
(4) Visual Inspection Programs	Michael Morrissey
(5) Review of past incidents, spills and counter-measures utilized	Gardner Flynn Sidney Levy
(6) Implement goals of PPC Plan	
(7) Coordinate activities for	
(a) Spill clean-up	Sidney Levy
(b) Notification of authorities	Steve Zubrin
(c) Establishment of training programs	Gardner Flynn
(8) Periodically review, evaluate PPC plan at regular intervals with changes as necessary.	Sidney Levy, Gardner Flynn
(9) Review new construction and process changes relative to PPC plan	Sidney Levy, Gardner Flynn
(10) Evaluate effectiveness of the overall PPC plan and make recommendations to management	Gardner Flynn

ORIGINAL

SECTION D - MATERIAL AND WASTE INVENTORY

Stroage facilities are shown on Figure #2 for the materials and tankage listed below:

Tank #	Horizontal(H)/ Vertical(V)/Rect(R)	Material(s) Stored	Capacity(Gal)	Materials of Construction
1	V	HCl (28-32%)	3,500	Fiberglass
2	V	HCl (28-32%)	4,500	Polypropylene
3	V	HCl (28-32%)	4,300	Polypropylene
4	V	Alum (50%)	6,300	Polypropylene
5	V	Caustic (50%)	5,800	Carbon Steel
6	H	Caustic (50%)	5,000	Carbon Steel
7	H	Toluol	1,500	Carbon Steel
8	H	#5 Fuel Oil	6,000	Carbon Steel
9	H	#5 Fuel Oil	5,000	Carbon Steel
10	R	Waste Oil	500	Carbon Steel
11	H	Waste Oil	1,000	Carbon Steel
12	H	Caustic (23%)	8,000	Carbon Steel
13	H	Caustic (23%)	10,000	Carbon Steel
14	H	Waste Oil	20,000	Carbon Steel
15	H	DAF Sludge	20,000	Carbon Steel
16	R	DAF Sludge	225,000	Concrete
16A	R	Wastewater	50,000	Concrete
17	R	Wastewater	25,000	Concrete
Area I		Paints	25x55-gallon drums	Steel
Area J		Chemicals	6x55-gallon drums	Steel
			Palletized Bags	
			Fibre Drums	

Material safety data sheets are attached for the above materials.

SECTION E - SPILL & LEAK PREVENTION & RESPONSE

ORIGINAL

The following areas indicated on Figure 2 show areas where potential leaks can occur, construction of containment, factors causing leaks, preventive measures and emergency measures.

Area	Tanks	Material Handled/Stored	Containment Construction	Factors Causing	Preventive Measures	Emergency Measures
A	1,2,3, 4,14,15, 17	Alum(50%) HCL(30%) Waste Oil	Earthen	Tank Overflow Leaks	TT Unloading Procedures	Pump into Tank #17
B	16,16A	DAF Sludge Wastewater	Concrete	Tank Overflow Leaks	Operational Procedures Inspections	Pump to Tank 17 via tank 16A
C	8,9	#5 Fuel Oil	Concrete	Leaks Overflow	Tank Inspections Unloading Procedures	Pump to WWTP Via Floor Drain
D	5,6	Caustic(50%)	Earthen	Tank Overflow Leaks	Tank Inspections Unloading Procedures	Pump to Tank 17 via Sump or Used Caustic Tank
E	9,10	Waste Oil	Earthen	Tank Overflow Leaks	Tank Inspections	Pump to WWTP via Tank #17 Shovels, Absorbant
F	12,13	Used Caustic Clarified Caustic(23%)	Concrete	Tank Leak Overflow	Tank Inspections Operating Procedures	Pump to Empty Tank/Wash down to floor drains to WWTP
G	7	Toluol	Concrete	Tank Leak Overflow	Tank Inspections Unloading Procedures	Pump to Drums
H	Drum Processing	Recycle Water Caustic(23%) HCl(30%)	Concrete Drainage Ditch	Tank Overflow Leaks	Operating Procedures Tank Inspections	Shut down process Drain to WWTP via Tank #17
I	Paint Storage	Paint	Concrete Floor Cinder Block Wall	Spills	Drip pans absorbant	Brooms, shovel absorbant

ORI
L (A

SECTION F - MATERIAL COMPATABILITY

(1) Materials of construction - All material handling, process and storage equipment are compatable with materials utilized in the process. Typical materials of construction and materials handled are as follows:

Process tanks/pumps/storage tanks/pipes	Process Material
CPVC, reenforced fiberglass, rubber lined or molded fiberglass, teflon, polypropylene, high density polyethylene	HCL(28-32%)
Carbon steel, CPVC	Caustic Soda(50%)
Carbon steel	Toluene
Carbon steel CPVC	Wastewater, sludge

(2) Process Stream Compatibility/Effects of Mixing

(a) Caustic soda with HCl - Effects are minimal to non-existant. Heat is produced with the by-products of NaCl + H_2O. The effect of increased salinity has minimal corrosive effects as it is not normally present and would have to be present over a long period of time to cause incompatibility problems with equipment materials of construction.

(b) HCl + phosphatizer solution - Reaction produces H_2NO_3 which, again, is not present normally nor over a long period of time. It does not cause compatability problems with equipment.

(c) Other combinations do not cause any reactions to occur under system process conditions or when inadvertantly mixed.

(3) Cleaning of pipes, vessels; pumps, etc, before re-use - All equipment is flushed at least 1X per week with water to remove sludge, resins, etc which have deposited in process equipment and to prepare equipment for repairs.

(4) Prevention Practices - HCl and caustic are segregated systems. The only time contact is made is improper dumps to the waste treatment system and even under these conditions does not harm equipment. Dumps of this nature are quickly diluted with waste rinse water reducing any heat produced to a harmless level.

(5) Compatability with Coatings - All tanks, structures, pumps, etc are painted with corrosion-resistant coatings whenever possible. Reactions described above do not cause incompatability problems with process or handling/storage equipment.

ORIGINAL
(Red)

SECTION G - INSPECTION AND MONITORING PROGRAM

Visual inspection are performed daily on pumps, valves, fittings, transfer lines, nozzles, pipes and hoses for leaks, spills and general condition. Production equipment is observed while in operation especially pressure lines while it is not necessary to test or observe storage tank systems as they are gravity systems. Condition of any diking and area inside the diking is inspected for general condition. The following areas are inspected regularly for problems or potential problems:

(1) Production Area
   (a) Pre-flush tanks
   (b) Chainer tanks
   (c) Exterior caustic (23%)
   (d) Exterior caustic hot rinse
   (e) 1st caustic (23%), 2nd caustic (23%) (Interiors).
   (f) 1st caustic hot rinse, 2nd caustic hot rinse (Interiors).
   (g) 1st acid (28%) Interior, 2nd acid (28%) Interior.
   (h) 1st cold rinse, 2nd (final) cold rinse (Interiors).
   (i) Phosphatizer (Interiors)
(2) Chemical storage areas - Tanks 1-3
(3) Fuel oil storage area - Tanks 8-9
(4) Waste oil storage area - Tanks 10-11
(5) Waste system - Tanks 14,15,16
(6) Waste Treatment System
   (a) #1 pumphouse
   (b) #2 pumphouse
   (c) DAF system
   (d) Caustic clarification system
   (e) Pre-coat filter system
   (f) Filter cake dumpster

Most inspections are performed during operating hours in connection with production where the line is monitored continuously. In the waste treatment area logs are maintained for all chemical usages, condition of tanks, etc to provide for proper supply as well as monitoring for potential spills.

Spill or leaks in the production area drain into the waste treatment system and are limited to preclude direct contamination of ground or surface waters or soil contamination, however, all chemicals and/or systems are treated equally.

ORIGINAL (Red)

SECTION H - PREVENTIVE MAINTENANCE

Equipment systems identified in Section G are maintained on a schedule which depends on expected equipment life, operating hours and/or result of wear noticed during regular inspections. The following areas are monitored on a preventive program as follows:

(1) Production Area
   (a) All tanks are cleaned 1-2X per week of all dirt, sludge and debris inspected and repaired if necessary.
   (b) Pumps are inspected, repacked and replaced/repaired as wear indicates.
   (c) Flanges and fittings are inspected and replaced, repacked or repaired.
   (d) Nozzles are inspected and replaced if necessary.
   (e) Hoses are inspected especially the fittings and replaced if necessary.
   (f) Control valves and manual valves are inspected and replaced/repaired as necessary.

(2) Chemical storage - (Tanks 1-6) - Flanges, valves and fittings are inspected regularly for signs of leakage and repacked, repaired or replaced as necessary. All materials of construction are resistant to corrosion so as to preclude corrosion. No hydrostatic tests are necessary as all chemical storage systems are gravity feed.

(3) Fuel oil storage area - (Tanks 8-9), valves and fittings are inspected, repacked or replaced per regular inspections. Tanks and piping are inspected for corrosion and replaced if necessary.

(4) Waste oil storage area - (Tanks 10, 11). Regular inspections are made for corrosion and tanks or piping are repaired as necessary.

(5) Waste System storage - (Tanks 14, 15, 16)
   (a) Tanks 14,15 are inspected regularly for leaks and repaired if necessary. Tank 15 is out of service and is scheduled to be emptied and and demolished.
   (b) Tank 16 is inspected for structural integrity and repaired if necessary.

(6) Waste Treatment System.
   (a) #1 Pumphouse - Oil skimmers are inspected and repaired if necessary. Clow pumps are inspected daily and repaired. Valves and flanges are inspected for leaks and repaired if necessary.
   (b) #2 Pumphouse - Pump, fittings, flanges and valves are inspected regularly and repaired/replaced as necessary.
   (c) DAF System - System is in almost continuous operation. Parts are stocked and replaced on a time available basis. Leakage from pumps valves, flanges and fittings is contained by concrete floor and retaining wall and pumped back into the treatment system as is the production area.
   (d) Caustic Clarification System - Same as above.
   (e) Pre-Coat Filter System - Same as above.
   (f) Dumpster - The dumpster containing the filter cake material discharged from the pre-coat filter is checked regularly and a new dumpster is delivered before the existing one is full.

ORIGINAL
(Red)

SECTION I - HOUSKEEPING PROGRAM

The housekeeping program is designed to utilize the type of practices which reduce accidental spills and safety hazzards. The following practices are in effect by area:

(1) Production Area - During and after production hours the following is performed as necessary:
   (a) Clean-up labels, bungs, etc from all floors.
   (b) Wash down floors and equipment to drains to WWTP.
   (c) All floors are swept periodically to remove dirt, shot and debris.

(2) Boiler Room
   (a) Chemical storage area.
      1 - Liquids: Drums of material are stored neatly upright and when in use, on drum racks with drums equipped with self-closing spigots. Drip pans are placed under each drum and surrounded with chemical absorbant to prevent potential spills from being tracked to other areas. Spills which do occur are swept up and removed to the WWTP for storage.
      2 - Powders - Bags are palletized and kept neatly stored with any drums of powdered materials. Spills are swept up to prevent tracking to other areas and disposed of in the WWTP.
   (b) Oil Spills - Chemical absorbent is placed around the oil pump area to prevent tracking to other areas. Periodically, the absorbant is swept up and replaced with new absorbant.
   (c) Floors are kept free of accumulations of material which could cause tracking into adjacent areas.

(3) Maintenance Shop - Floors are maintained so as to prevent tracking of oil, grease, etc to other areas. Oil, cleaners, etc are stored so as to prevent spillage.

(4) Garage, Compressor and Storage Area - Floors are kept swept and chemical absorbant is used where necessary to absorb oil spills. Oil drums are stored neatly in an upright position.

(5) Paint Room - Paint and solvent drums are stored neatly in an upright position. Paint spills are cleaned up promptly to prevent tracking to other areas and fire hazzard. Floors are swept periodically.

(6) Waste Oil Storage Area - Dikes are kept free of vegetation and repaired of any damage. Spills are promptly cleaned up.

(7) Waste System Storage Area
   (a) Diking is maintained free of vegetation and repaired when damaged.
   (b) Spills are promptly cleaned up.
   (c) Tanks are kept free of external debris.
   (d) Floors in #1 and #2 pumphouses are cleaned periodically and flushed to the WWTP.
   (e) Dumpsters are kept covered while not being filled.

(8) Chemical Storage Area
   (a) Spills are removed promptly and flushed to the WWTP for disposal.
   (b) Tanks are kept free of external debris.
   (c) Diking is kept free of vegetation and repaired if damaged.

(9) Waste Treatment System Area (DAF room area)
   (a) Pre-coat filter area - Accidental liquid spills are flushed immediately to the WWTP. Solid pre-coat cake and cake solids are deposited in 55-gallon drums for disposal in dumpsters. Cake which overflows drums accidentally is shoveled up into drums for disposal in dumpsters.

ORIGINAL
(Red)

(b) DAF System - Liquid and powdered spills are flushed to the WWTP sump to return for treatment. Trash, bungs, etc are removed and floors are kept free of heavy sludge.

(c) Yard surrounding building is kept free of debris and trash.

(10) Drum Storage Areas - Drums are stored neatly in a horizontal position with bungs on tightly to prevent any leakage. Spills which occur due to leakage are promptly cleaned up. Scrap drums are stored in a separate area and are drained and flushed prior to storage. Scrap drums which are crushed for disposal are stacked neatly and placed in dumpsters for disposal.

(11) Conveyor Area - Drums are loaded from trailers onto the conveyor in an upright position so as to preclude drainage or spills. Chemical absorbant is used to remove any accidental spills which do occur either in the trailers or in the area of unloading. Label removed drums in the area are stored in upright positions and the drums in use is on a drum rack with a self-closing spigot. The area under the spigot is protected with a pan and chemical absorbant is used to clean up any spills.

ORIGINAL
(Red)

SECTION J - SECURITY

Only authorized personnel are permitted access to chemical transfer, control valves and chemical addition points. Areas include, but are not limited to chemical storage areas, process areas, waste treatment pump stations, etc. Where control valving is located in control buildings, the buildings are padlocked and only authorized personnel have keys.

The plant site is enclosed by a chain link fence with gates. Plant production schedules dictate that personnel are on site 24 hours/day, 5 days/week. On weekends or non-production days (at least 2 days/week) the gates are closed and locked. The plant is periodically checked during off hours by local police and plant personnel to report any unusual activity in the plant complex area and waste treatment plant.

Plant personnel are present during all loading/unloading operations to assure that proper procedures are followed to prevent spills or accidents.

ORIGINAL
(Red)

SECTION K - EXTERNAL FACTORS

Power outages, floods and severe weather have no effect on the storage of materials in storage tanks as chemical transfer from storage tanks is gravity or pumps. The exception is the waste plant which cannot process waste water or clarify caustic without pumps.

The site is located above the 100-year flood plain and temperature ranges do no present a factor in freezing of tank contents.

During strikes, management personnel would operate equipment to remove material from the containment areas, operate the waste plant or contact clean-up services as required.

ORIGINAL
(Red)

SECTION L - INTERNAL & EXTERNAL COMMUNICATIONS OR ALARM SYSTEMS

The industrial complex is equipped with the following communications/alarm systems:

(1) American Communications phone system with phones located throughout the complex. The phones are equipped to allow paging of key plant personnel. Each phone has a list of emergency contact numbers including fire, police and rescue.

(2) National Guardian Security Services maintains an alarm system and notifies the appropriate emergency personnel and/or agency as follows:

Item	Function/Alarm	Code	Indicator
(a) Boiler	safety shutdown	234	1
(b) Boiler	low water	"	2
(c) Waste storage tank	high level	"	3
(d) Paint storage room	water flow	411	1
(e) Small shed	water flow	"	2
(f) CO_2	alarm	"	3
(g) Paint storage room	low air pressure	"	5
(h) Small shed	" " "	"	6
(i) Gate valves		"	7

SECTION N - LIST OF EMERGENCY COORDINATORS

Coordinator	Address	Telephone #
Steve Zubrin		(609)853-1543
Sidney Levy		(302)798-6466
Gerry Butler		(215)671-0798
Mark Daniels		(609)268-9456
Norman Backus		(302)762-3019

ORIGINAL (Red)

SECTION O - DUTIES AND RESPONSIBILITIES OF THE EMERGENCY COODINATOR

Whenever there is an imminent or actual emergency, the emergency coordinator immediately:

(1) Activate alarms by the paging system and/or plant whistle.
(2) Notify the appropriate local emergency response agencies including the Pa DER.

Whenever there is a discharge, fire, or explosion, the emergency coordinator immediately must identify the character, source, amount and extent of emmitted or discharged materials. He also must determine the possible hazards to human health and/or the environment either directly or indirectly.

If the emergency coordinator determines that the emergency will threaten human life and/or the environment, he will immediately notify local response agencies and indicate if evacuation of local areas is advisable; and notify the Pa DER by telephone at 717-878-4343 and the National Response Center at 800-424-8802 and report the following:

(1) Name of the person reporting the incident.
(2) Name and location of the installation.
(3) Phone number where the person reporting the spill can be reached.
(4) Date, time, and location of the incident.
(5) A brief description of the incident, nature of the materials or wastes involved, extent of any injuries, and possible hazzards to human health and/or the environment.
(6) The estimated quantity of the materials or wastes spilled.
(7) The extent of contimination to air, water or land.

During an emergency, the emergency coordinator must take all reasonable measures to ensure that the fire, explosion, emmission or discharge do not occur, recurr or spread to other areas and contact other materials or wastes in the industrial complex. These measures include, but are not limited to stopping manufacturing processes or operations, collecting and containing released materials or wastes, and removing or isolating containers.

If production is stopped, the emergency coordinator must ensure that adequate monitoring is conducted for leaks, ruptures, pressure build-up, gas generation in tanks, valves, pipes or other equipment as appropriate.

After the emergency, the emergency coordinator with Pa DER approval must provide for treating, storing or disposing of residues, contaminated soil, etc as deemed appropriate.

The emergency coordinator must insure that in the affected areas of the plant complex that no material or waste incompatible with the emmitted or discharged residues is processed, stored, treated, or disposed of until clean-up procedures are completed: and, all emergency equipment listed in the PPC Plan is returned to its original ready status before operations are resumed.

Within 15 days after the incident, the installation must submit a written report on the incident to the PA DER which includes the following:

(1) Name, address, and telephone number of the individual filing the report.
(2) Name, address, and telephone number of the installation.
(3) Date, time, and location of the incident.
(4) A brief description of the circumstances causing the incident.
(5) Description and estimated quantity by weight or volume of materials or wastes involved.
(6) An assessment of any contamination of land, water, or air that has occurred due to the incident.
(7) Estimated euantity and disposition of recovered materials or wastes that have resulted from the incident.
(8) A description of what actions the installation plans to take to prevent a similar occurrence in the future.

SECTION S - EVACUATION PLAN

Evacuations are signalled by several three short blasts on the plant whistle and/or the plant paging system. The whistle and paging system are strategically located in major areas where emergencies can arise.

Primary evacuation routes are marked as required by fire and federal regulations. When the signal is given, all personnel proceed to the nearest exit and proceed towards the front of the plant for a head count. If rescue is required, rescue squads will aid in evacuation if it is determined all employees are not accounted for.

Alternate evacuation routes are dictated by proximity to primary routes and best avenue of excape.

Periodic drills are held at least once/quarter.

ORIGINAL (Red)

SECTION V - POLLUTION INCIDENT HISTORY

Date(s)	Incident	Corrective Action	Preventive Action	Date Complete
2/18/86	Flow of unidentified red material to BP waste plant effluent overflow portion of Stoney Creek.	Spill containment by Snow Environmental Services and identification of source	Source eliminated by sealing drain pipe in boiler room/chainer area	
	Flow of water seepage from same area as above but black in appearence	Locate source as flow from drum leak test water and non-contact cooling water. Divert water flow to WWTP.	Construct pipeline for discharge to outfall 001 at Stoney Creek Apply for NPDES permit for discharge to above outfall.	
	Spill from large concrete holding tank overflow and migration of same into Stoney Creek via heavy rain.	Dam up area of immediate overflow. Pump area to WWTP transfer tank Waste Conversions pump 2' from large concrete tank	Construct earthen dike around concrete tanks. Install level indicator monitor to indicate high level-transfer large tank to small tank to pump to WWTP to maintain 2' of freeboard in large concrete tank.	
	Spill(s) in diked area of Pumphouse #1 and chemical storage tanks	Monitor levels in #1 pumphouse tank, oil skimmer storage tank and DAF float storage tank to prevent overflows. Filter DAF float from storage tank to lower level and monitor.	Install level controls to transfer to small concrete tank at preset level to prevent overflow. Filter DAF float directly from DAF sludge collection tank in recycle room to keep sludge out of diked area around #1 pumphouse.	
	Various spills in yard & plant.	Clean-up with shovels etc	Refer to Housekeeping Program (Section 1).	

SECTION W - IMPLEMENTATION SCHEDULE

ORIGINAL (Red)

Item	Corrective Action	Completion Date(s)
(1) Water flow/seepage into Stoney Creek especially during periods of heavy rain.	Dig up soil in area of discharge and excavate area to locate source.	
(2) Spills from all concrete holding tanks and steel tanks in diked areas.	Construction/operation of WWTP to discontinue the use of subject tanks. Emptying of tanks via the new WWTP.	
(3) Spills in yard and plant.	Implement housekeeping program. Implement preventive maintenance program.	
(4) Spills and/or potential spills from chemical storage tanks.	Construct concrete containments.

SECTION A - GENERAL DESCRIPTION OF THE INDUSTRIAL ACTIVITY

Metro Container Corporation is a closed-head drum reconditioning plant which processes used 55-gallon steel drums for resale and/or disposal. Operations include unloading, paint stripping, label removal, cleaning, metal cleaning, phosphatizing, dedenting, shot blasting, leak testing, and painting per the process flow chart below:

Drums Unloaded → Drums Inspected → Drums Drained → Drums Pre-flushed And/or Chained → Exterior Paint Stripping/Cleaning (23% Caustic) →

Exterior Rinse → Chime Straightening → Interior Cleaning (23% Caustic) → 2nd Interior Cleaning (23% Caustic) → 1st Interior Hot Rinse

2nd Interior Hot Rinse → 1st Interior Metal Strip (28% HCl) → 2nd Interior Metal Strip (28% HCl) → 1st Cold Rinse → 2nd(Final) Cold Rinse →

Phosphatizing → Syphoning → Drying → Dedenting → Shot Blasting → Leak Testing →

Pre-drying → Painting → Baking → Warehouse → Loading

Waste products include solid waste [illegible], shot blasting sludge, paper waste, DAF float filter cake waste, and waste oil primarily from refining operations.

Figure #1 is a 8½"x11" portion of a [illegible] USGS map of the Marcus Hook, Pa-NJ-Del SW/4 Chester 15 minute quadrangle showing the following:

(a) Location of the site and boundaries of the site.
(b) Location of surface drainage courses leading away from the site(Detailed in Figure #2) and major surface streams and tributaries near the site.
(c) Public/private groundwater supplies are not in the vicinity of the site.
(d) Public/private surface water intakes are downstream of the point where the BP Oil outfall/Stoney Creek joins the Delaware River. The intakes are used soley for industrial purposes such as cooling tower make-up, process water, etc as far as can be determined.

Figure #2 shows the following:

(a) A general layout of the [illegible]
(b) Property boundaries.
(c) Areas occupied by manufacturing facilities.
(d) Raw materials storage.
(e) Loading and unloading areas.
(f) Waste handling, storage and treatment facilities.
(g) Drains/pipes which lead away from potential leak of spill areas.
(h) Outfall pipes which discharge to Stoney Creek/BP Oil outfall tributary.
(i) Secure and open access areas.
(j) Entrance and exit areas to the site.

ORIGINAL
(Red)

SECTION B - DESCRIPTION OF EXISTING EMERGENCY RESPONSE PLAN(S).

An existing plan (PRCP) was submitted on June, 1982 which is currently in effect and will be superseeded by the PRC plan submitted herin. A copy of this plan is attached.

ORIGINAL
(Red)

SECTION C - ORGANIZATIONAL STRUCTURE FOR IMPLEMENTATION OF PPC PLAN

The following personnel are listed according to duties assigned:

Duties	Personnel
(1) Materials inventory - identification of materials and wastes	Peter Cabrey Steve Zubrin
(2) Identification of potential spill sources	Gardner Flynn
(3) Establishment of spill reporting procedures	Norman Backus
(4) Visual Inspection Programs	Michael Morrissey
(5) Review of past incidents, spills and counter-measures utilized	Gardner Flynn Sidney Levy
(6) Implement goals of PPC Plan	
(7) Coordinate activities for	
(a) Spill clean-up	Sidney Levy
(b) Notification of authorities	Steve Zubrin
(c) Establishment of training programs	Gardner Flynn
(8) Periodically review, evaluate PPC plan at regular intervals with changes as necessary.	Sidney Levy, Gardner Flynn
(9) Review new construction and process changes relative to PPC plan	Sidney Levy, Gardner Flynn
(10) Evaluate effectiveness of the overall PPC plan and make recommendations to management	Gardner Flynn

ORIGINAL
(Red)

SECTION D - MATERIAL AND WASTE INVENTORY

Stroage facilities are shown on Figure #2 for the materials and tankage listed below:

Tank #	Horizontal(H)/ Vertical(V)/Rect(R)	Material(s) Stored	Capacity(Gal)	Materials of Construction
1	V	HCl [illegible]	3,500	Fiberglass
2	V	HCl [illegible]	4,500	Polypropylene
3	V	HCl [illegible]	4,300	Polypropylene
4	V	Alum [illegible]	6,300	Polypropylene
5	V	Caustic [illegible]	5,800	Carbon Steel
6	H	Caustic [illegible]	5,000	Carbon Steel
7	H	Toluol	1,500	Carbon Steel
8	H	#5 Fuel Oil	6,000	Carbon Steel
9	H	#5 Fuel Oil	5,000	Carbon Steel
10	R	Waste [illegible]	500	Carbon Steel
11	H	Waste [illegible]	1,000	Carbon Steel
12	H	Caustic [illegible]	8,000	Carbon Steel
13	H	Caustic [illegible]	10,000	Carbon Steel
14	H	Waste [illegible]	20,000	Carbon Steel
15	H	DAF Sludge	20,000	Carbon Steel
16	R	DAF Sludge	225,000	Concrete
16A	R	Wastewater	60,000	Concrete
17	R	Wastewater	25,000	Concrete
Area I		Paints	25x55-gallon drums	Steel
Area J		Chemicals	6x55-gallon drums	Steel
			Palletized Bags	
			Fiber Drums	

Material safety data sheets are attached for the above materials.

SECTION E - SPILL & LEAK PREVENTION & RESPONSE

The following areas indicated on Figure 2 show areas where potential leaks can occur, construction of containment, factors causing leaks, preventive measures and emergency measures

Area	Tanks	Material Handled/Stored	Containment Construction	Factors Causing	Preventive Measures	Emergency Measures
A	1,2,3, 4,14,15, 17	Alum(50%) HCL(30%) Waste Oil	Earthen	Tank Overflow Leaks	TT Unloading Procedures	Pump into Tank #17
B	16,16A	DAF Sludge Wastewater	Concrete	Tank Overflow Leaks	Operational Procedures Inspections	Pump to Tank 17 via tank 16A
C	8,9	#5 Fuel Oil	Concrete	Leaks Overflow	Tank Inspections Unloading Procedures	Pump to WWTP Via Floor Drain
D	5,6	Caustic(50%)	Earthen	Tank Overflow Leaks	Tank Inspections Unloading Procedures	Pump to Tank 17 via Sump or Used Caustic Tank
E	9,10	Waste Oil	Earthen	Tank Overflow Leaks	Tank Inspections	Pump to WWTP via Tank #17 Shovels, Absorbant
F	12,13	Used Caustic Clarified Caustic(23%)	Concrete	Tank Leak Overflow	Tank Inspections Operating Procedures	Pump to Empty Tank/Wash down to floor drains to WWTP
G	7	Toluol	Concrete	Tank Leak Overflow	Tank Inspections Unloading Procedures	Pump to Drums
H	Drum Processing	Recycle Water Caustic(23%) HCl(30%)	Concrete Drainage Ditch	Tank Overflow Leaks	Operating Procedures Tank Inspections	Shut down process Drain to WWTP via Tank #17
I	Paint Storage	Paint	Concrete Floor Cinder Block Wall	Spills	Drip pans absorbant	Brooms, shovel absorbant

ORIGINAL
(Red)

SECTION F - MATERIAL COMPATABILITY

(1) Materials of construction - All material handling, process and storage equipment are compatable with materials utilized in the process. Typical materials of construction and materials handled are as follows:

Process tanks/pumps/storage tanks/pipes	Process Material
CPVC, reenforced fiberglass, machined or molded fiberglass, teflon, polypropylene, high density polyethylene	HCL (28-32%)
Carbon steel, CPVC	Caustic Soda (50%)
Carbon steel	Toluene
Carbon steel CPVC	Wastewater, sludge

(2) Process Stream Compatibility/Effects of Mixing
(a) Caustic soda with HCl - Effects are minimal to non-existant. Heat is produced with the by-product of NaCl + H_2O. The effect of increased salinity has minimal corrosive effects as it is not normally present and would have to be present over a long period of time to cause incompatibility problems with equipment materials of construction.
(b) HCl + phosphalizer solution - Reaction produces H_2NO_3 which, again, is not present normally nor over a long period of time. It does not cause compatability problems with equipment.
(c) Other combinations do not cause any reactions to occur under system process conditions or when adequately mixed.

(3) Cleaning of pipes, vessels; pumps, etc. before re-use - All equipment is flushed at least 1X per week with water to remove sludge, resins, etc which have deposited in process equipment and to prepare equipment for repairs.

(4) Prevention Practices - HCl and caustic are segregated systems. The only time contact is made is improper dumps to the waste treatment system and even under these conditions does not harm equipment. Dumps of this nature are quickly diluted with waste or rise water reducing any heat produced to a harmless level.

(5) Compatability with Coatings - All tanks, structures, pumps, etc are painted with corrosion-resistant coatings whenever possible. Reactions described above do not cause incompatability problems with process or handling/storage equipment.

ORIGINAL
(Red)

SECTION G - INSPECTION AND MONITORING PROGRAM

Visual inspection are performed daily on pumps, valves, fittings, transfer lines, nozzles, pipes and hoses for leaks, spills and general condition. Production equipment is observed while in operation especially pressure lines while it is not necessary to test or observe storage tank systems as they are gravity systems. Condition of any diking and area inside the diking is inspected for general condition. The following areas are inspected regularly for problems or potential problems:

(1) Production Area
- (a) Pre-flush tanks
- (b) Chainer tanks
- (c) Exterior caustic (23%)
- (d) Exterior caustic hot rinse
- (e) 1st caustic (23%), 2nd caustic (23%) (Interiors).
- (f) 1st caustic hot rinse, 2nd caustic hot rinse (Interiors).
- (g) 1st acid (28%) Interior, 2nd acid (28%) Interior.
- (h) 1st cold rinse, 2nd (final) cold rinse (Interiors).
- (i) Phosphatizer (Interiors)

(2) Chemical storage areas - Tanks [illegible]
(3) Fuel oil storage area - Tanks [illegible]
(4) Waste oil storage area - Tanks [illegible]
(5) Waste system - Tanks 14,15,16
(6) Waste Treatment System
- (a) #1 pumphouse
- (b) #2 pumphouse
- (c) DAF system
- (d) Caustic clarification system
- (e) Pre-coat filter system
- (f) Filter cake dumpster

Most inspections are performed during operating hours in connection with production where the line is monitored continuously. The waste treatment area logs are maintained for all chemical usages, condition of tanks, etc to provide for proper supply as well as monitoring for potential spills.

Spill or leaks in the production area drain into the waste treatment system and are limited to preclude direct contamination of ground or surface waters or soil contamination, however, all chemicals and/or systems are treated equally.

ORIGINAL
(Red)

SECTION H - PREVENTIVE MAINTENANCE

Equipment systems identified in Section G are maintained on a schedule which depends on expected equipment life, operating hours and/or result of wear noticed during regular inspections. The following areas are monitored on a preventive program as follows:

(1) Production Area
- (a) All tanks are cleaned 1-2X per week of all dirt, sludge and debris inspected and repaired if necessary.
- (b) Pumps are inspected, repacked and replaced/repaired as wear indicates.
- (c) Flanges and fittings are inspected and replaced, repacked or repaired.
- (d) Nozzles are inspected and replaced if necessary.
- (e) Hoses are inspected especially the fittings and replaced if necessary.
- (f) Control valves and manual valves are inspected and replaced/repaired as necessary.

(2) Chemical storage - (Tanks 1-6) Flanges, valves and fittings are inspected regularly for signs of leakage and repacked, repaired or replaced as necessary. All materials of construction are resistant to corrosion so as to preclude corrosion. No hydrostatic tests are necessary as all chemical storage systems are gravity feed.

(3) Fuel oil storage area - (Tanks [illegible]) Valves and fittings are inspected, repacked or replaced per regular inspections. Tanks and piping are inspected for corrosion and repaired if necessary.

(4) Waste oil storage area - (Tanks [illegible]) Regular inspections are made for corrosion and tanks or piping are repaired as necessary.

(5) Waste System storage - (Tanks 14,15,16)
- (a) Tanks 14,15 are inspected regularly for leaks and repaired if necessary. Tank 15 is out of service and is scheduled to be emptied and and demolished.
- (b) Tank 16 is inspected for structural integrity and repaired if necessary.

(6) Waste Treatment System.
- (a) #1 Pumphouse - Oil skimmers are inspected and repaired if necessary. Clow pumps are inspected daily and repaired. Valves and flanges are inspected for leaks and repaired if necessary.
- (b) #2 Pumphouse - Pump, fittings, flanges and valves are inspected regularly and repaired/replaced as necessary.
- (c) DAF System - System is in almost continuous operation. Parts are stocked and replaced on a time available basis. Leakage from pumps valves, flanges and fittings are contained by concrete floor and retaining wall and pumped back into the treatment system as is the production area.
- (d) Caustic Clarification System - Same as above.
- (e) Pre-Coat Filter System - Same as above.
- (f) Dumpster - The dumpster containing the filter cake material discharged from the pre-coat filter is checked regularly and a new dumpster is delivered before the existing one is full.

SECTION I - HOUSKEEPING PROGRAM

Unc... (Red)

The housekeeping program is designed to utilize the type of practices which reduce accidental spills and safety hazards. The following practices are in effect by area:

(1) Production Area - During and after production hours the following is performed as necessary:
   (a) Clean-up labels, bungs, etc from all floors.
   (b) Wash down floors and equipment to drains to WWTP.
   (c) All floors are swept periodically to remove dirt, shot and debris.
(2) Boiler Room
   (a) Chemical storage area.
      1 - Liquids: Drums of material are stored neatly upright and when in use, on drum racks with drums equipped with self-closing spigots. Drip pans are placed under each drum and surrounded with chemical absorbant to prevent potential spills from being tracked to other areas. Spills which do occur are swept up and removed to the WWTP for storage.
      2 - Powders - Bags are palletized and kept neatly stored with any drums of powdered materials. Spills are swept up to prevent tracking to other areas and disposed of in the WWTP.
   (b) Oil Spills - Chemical absorbant is placed around the oil pump area to prevent tracking to other areas. Periodically, the absorbant is swept up and replaced with new absorbant.
   (c) Floors are kept free of accumulations of material which could cause tracking into adjacent areas.
(3) Maintenance Shop - Floors are maintained so as to prevent tracking of oil, grease, etc to other areas. Oil, cleaners, etc are stored so as to prevent spillage.
(4) Garage, Compressor and Storage Area - Floors are kept swept and chemical absorbant is used where necessary to absorb oil spills. Oil drums are stored neatly in an upright position.
(5) Paint Room - Paint and solvent drums are stored neatly in an upright position. Paint spills are cleaned up promptly to prevent tracking to other areas and fire hazzard. Floors are swept periodically.
(6) Waste Oil Storage Area - Dikes are kept free of vegetation and repaired of any damage. Spills are promptly cleaned up.
(7) Waste System Storage Area
   (a) Diking is maintained free of vegetation and repaired when damaged.
   (b) Spills are promptly cleaned up.
   (c) Tanks are kept free of external debris.
   (d) Floors in #1 and #2 pumphouses are cleaned periodically and flushed to the WWTP.
   (e) Dumpsters are kept covered while not being filled.
(8) Chemical Storage Area
   (a) Spills are removed promptly and flushed to the WWTP for disposal.
   (b) Tanks are kept free of external debris.
   (c) Diking is kept free of vegetation and repaired if damaged.
(9) Waste Treatment System Area (DAF and area)
   (a) Pre-coat filter area - Accidental liquid spills are flushed immediately to the WWTP. Solid pre-coat cake and cake solids are deposited in 55-gallon drums for disposal in dumpsters. Cake which overflows drums accidentally is shoveled up into drums for disposal in dumpsters.

ORIGINAL
(Red)

(b) DAF System - Liquid and powdered spills are flushed to the WWTP sump to return for treatment. Trash, bungs, etc are removed and floors are kept free of heavy sludge.

(c) Yard surrounding building is kept free of debris and trash.

(10) Drum Storage Areas - Drums are stored neatly in a horizontal position with bungs on tightly to prevent any leakage. Spills which occur due to leakage are promptly cleaned up. Scrap drums are stored in a separate area and are drained and flushed prior to storage. Scrap drums which are crushed for disposal are stacked neatly and placed in dumpsters for disposal.

(11) Conveyor Area - Drums are loaded from trailers onto the conveyor in an upright position so as to preclude drainage or spills. Chemical absorbant is used to remove any accidental spills which do occur either in the trailers or in the area of unloading. Empty removed drums in the area are stored in upright positions and the drums in use are on a drum rack with a self-closing spigot. The area under the spigot is protected with a pan and chemical absorbant is used to clean up any spills.

ORIGINAL
(Red)

SECTION J - SECURITY

Only authorized personnel are permitted access to chemical transfer, control valves and chemical addition points. Areas include, but are not limited to chemical storage areas, process areas, waste treatment pump stations, etc. Where control valving is located in control buildings, the buildings are padlocked and only authorized personnel have keys.

The plant site is enclosed by a chain link fence with gates. Plant production schedules dictate that personnel are on site 24 hours/day, 5 days/week. On weekends or non-production days (at least 2 days/week) the gates are closed and locked. The plant is periodically checked during off hours by local police and plant personnel to report any unusual activity in the plant complex area and waste treatment plant.

Plant personnel are present during all loading/unloading operations to assure that proper procedures are followed to prevent spills or accidents.

ORIGINAL
(Red)

SECTION K - EXTERNAL FACTORS

Power outages, floods and severe weather have no effect on the storage of materials in storage tanks as chemical transfer from storage tanks is gravity or pumps. The exception is the waste plant which cannot process waste water or clarify caustic without pumps.

The site is located above the 100-year flood plain and temperature ranges do no present a factor in freezing of tank contents.

During strikes, management personnel would operate equipment to remove material from the containment areas, operate the waste plant or contact clean-up services as required.

ORIGINAL
(Red)

SECTION L - INTERNAL & EXTERNAL COMMUNICATIONS OR ALARM SYSTEMS

The industrial complex is equipped with the following communications/alarm systems:

(1) American Communications phone system with phones located throughout the complex. The phones are equipped to allow paging of key plant personnel. Each phone has a list of emergency contact numbers including fire, police and rescue.

(2) National Guardian Security Services maintains an alarm system and notifies the appropriate emergency personnel and/or agency as follows:

Item	Function/Alarm	Code	Indicator
(a) Boiler	safety shutdown	234	1
(b) Boiler	low water	"	2
(c) Waste storage tank	high level	"	3
(d) Paint storage room	water flow	411	1
(e) Small shed	water flow	"	2
(f) CO_2	alarm	"	3
(g) Paint storage room	low air pressure	"	5
(h) Small shed	"	"	6
(i) Gate valves		"	7

SECTION N - LIST OF EMERGENCY COORDINATORS

Coordinator	Address	Telephone #
Steve Zubrin		(609)853-1543
Sidney Levy		(302)798-6466
Gerry Butler		(215)671-0798
Mark Daniels		(609)268-9456
Norman Backus		(302)762-3019

SECTION O - DUTIES AND RESPONSIBILITIES OF THE EMERGENCY COODINATOR

ORIGINAL (Red)

Whenever there is an imminent or actual emergency, the emergency coordinator immediately:

(1) Activate alarms by the paging system and/or plant whistle.
(2) Notify the appropriate local emergency response agencies including the Pa DER.

Whenever there is a discharge, fire, or explosion, the emergency coordinator immediately must identify the character, source, amount and extent of emmitted or discharged materials. He also must determine the possible hazards to human health and/or the environment either directly or indirectly.

If the emergency coordinator determines that the emergency will threaten human life and/or the environment, he will immediately notify local response agencies and indicate if evacuation of local areas is advisable; and notify the Pa DER by telephone at 717-878-4343 and the National Response Center at 800-424-8802 and report the following:

(1) Name of the person reporting the incident.
(2) Name and location of the installation.
(3) Phone number where the person reporting the spill can be reached.
(4) Date, time, and location of the incident.
(5) A brief description of the incident, nature of the materials or wastes involved, extent of any injuries, and possible hazzards to human health and/or the environment.
(6) The estimated quantity of the materials or wastes spilled.
(7) The extent of contimination to air, water or land.

During an emergency, the emergency coordinator must take all reasonable measures to ensure that the fire, explosion, emmission or discharge do not occur, recurr or spread to other areas and contact other materials or wastes in the industrial complex. These measures include, but are not limited to stopping manufacturing processes or operations, collecting and containing released materials or wastes, and removing or isolating containers.

If production is stopped, the emergency coordinator must ensure that adequate monitoring is conducted for leaks, ruptures, pressure build-up, gas generation in tanks, valves, pipes or other equipment as appropriate.

After the emergency, the emergency coordinator with Pa DER approval must provide for treating, storing or disposing of residues, contaminated soil, etc as deemed appropriate.

The emergency coordinator must insure that in the affected areas of the plant complex that no material or waste incompatible with the emmitted or discharged residues is processed, stored, treated, or disposed of until clean-up procedures are completed: and, all emergency equipment listed in the PPC Plan is returned to its original ready status before operations are resumed.

Within 15 days after the incident, the installation must submit a written report on the incident to the PA DER which includes the following:

(1) Name, address, and telephone number of the individual filing the report.
(2) Name, address, and telephone number of the installation.
(3) Date, time, and location of the incident.
(4) A brief description of the circumstances causing the incident.
(5) Description and estimated quantity by weight or volume of materials or wastes involved.
(6) An assessment of any contamination of land, water, or air that has occurred due to the incident.
(7) Estimated euantity and disposition of recovered materials or wastes that have resulted from the incident.
(8) A description of what actions the installation plans to take to prevent a similar occurrence in the future.

SECTION S - EVACUATION PLAN

Evacuations are signalled by several three short blasts on the plant whistle and/or the plant paging system. The whistle and paging system are strategically located in major areas where emergencies can arise.

Primary evacuation routes are marked as required by fire and federal regulations. When the signal is given, all personnel proceed to the nearest exit and proceed towards the front of the plant for a head count. If rescue is required, rescue squads will aid in evacuation if it is determined all employees are not accounted for.

Alternate evacuation routes are dictated by proximity to primary routes and best avenue of excape.

Periodic drills are held at least once/quarter.

ORIGINAL
(Red)

SECTION T - ARRANGMENT WITH EMERGENCY RESPONSE CONTRACTORS.

In the event of a major spill, one the following contractors will be contacted by the emergency coordinator:

(1) Snow Environmental Services
11th Street & Aspahs Rd
Bala Cynwyd, Pa 19004
(215)494-8558(Aston Office)

(2) Continental Vanguard, Inc
204 Harding Ave
Bellmawr, N J
(609)931-0950

(3) Waste Conversion, Inc
2829 Sandstone Drive
Hatfield, Pa 19440
(215)822-8996

ORIGINAL (Red)

SECTION V - POLLUTION INCIDENT HISTORY

ORIGINAL (Red)

Date(s)	Incident	Corrective Action	Preventive Action	Date Complete
2/18/86	Flow of unidentified red material to BP waste plant effluent overflow portion of Stoney Creek.	Spill containment by Snow Environmental Services and identification of source	Source eliminated by sealing drain pipe in boiler room/chainer area	
	Flow of water seepage from same area as above but black in appearence	Locate source as flow from drum leak test water and non-contact cooling water. Divert water flow to WWTP.	Construct pipeline for discharge to outfall 001 at Stoney Creek Apply for NPDES permit for discharge to above outfall.	
	Spill from large concrete holding tank overflow and migration of same into Stoney Creek via heavy rain.	Dam up area of immediate overflow. Pump area to WWTP transfer tank Waste Conversions pump 2' from large concrete tank	Construct earthen dike around concrete tanks. Install level indicator monitor to indicate high level-transfer large tank to small tank to pump to WWTP to maintain 2' of freeboard in large concrete tank.	
	Spill(s) in diked area of Pumphouse #1 and chemical storage tanks	Monitor levels in #1 pumphouse tank, oil skimmer storage tank and DAF float storage tank to prevent overflows. Filter DAF float from storage tank to lower level and monitor.	Install level controls to transfer to small concrete tank at preset level to prevent overflow. Filter DAF float directly from DAF sludge collection tank in recycle room to keep sludge out of diked area around #1 pumphouse.	
	Various spills in yard & plant.	Clean-up with shovels etc	Refer to Housekeeping Program (Section 1).	

SECTION W - IMPLEMENTATION SCHEDULE

ORIGINAL
(Red)

Item	Corrective Action	Completion Date(s)
(1) Water flow/seepage into Stoney Creek especially during periods of heavy rain.	Dig up soil in area of discharge and excavate area to locate source.	
(2) Spills from all concrete holding tanks and steel tanks in diked areas.	Construction/operation of WWTP to discontinue the use of subject tanks. Emptying of tanks via the new WWTP.	
(3) Spills in yard and plant.	Implement housekeeping program. Implement preventive maintenance program.	
(4) Spills and/or potential spills from chemical storage tanks.	Construct concrete containments.

QUALITY CONTROL NOTICE

Although not required by the Federal Register, December 3, 1979 Volatile Method 624 procedure, the laboratory prepares VOA blanks when compositing water samples and preparing low and medium level hazardous waste EPA VOA samples. This is to insure that the glassware used is free from contamination, and to monitor the possibility of cross-contamination from high levels of volatile organic compounds in some samples and the laboratory atmosphere.

The compositing or method blank prepared with this CompuChem® sample, # 26752 , contained the compounds and concentrations listed below. The concentration in the associated sample has been adjusted and the data flagged with a qualifier.

Compound	Blank Concentration	Sample Concentration	Adjusted Sample Concentration	Applicable Qualifier
Methylene Chloride	69	620	550	BG

The following data qualifiers are used by EPA and adopted by CompuChem® for reporting purposes:

BG = The concentration in the blank is greater than ½ of the method detection limit and is less than or equal to ½ the concentration detected in a sample; the concentration in the blank is subtracted from the sample.

MIDLAND DIVISION
THE DEXTER CORPORATION
EAST WATER STREET, WAUKEGAN, ILLINOIS 60085 • 312/623-4200

ORIGINAL
(Red)

Dear Customer:

As part of Midland's continuous efforts of providing our customers with information needed to comply with the Federal Occupational Safety and Health Administration (OSHA) Hazard Communication Regulation (29 C.F.R. 1910.1200), we are herewith submitting copies of all of the Material Safety Data Sheets for products which you have recently purchased. We request that you forward the enclosed Material Safety Data Sheet(s) to the appropriate person who is responsible for health and safety in your firm. This information is needed in order to comply with your responsibilities under the recently enacted regulation for the training and education of your work force.

In addition to providing you with Material Safety Data Sheets, Midland has rated our products with respect to health, flammability and reactivity based upon the National Paint and Coatings Association's Hazardous Material Identification System (HMIS). This information has been included on our Material Safety Data Sheets as well. Personal protection recommendations will appear in Section 7 of the Material Safety Data Sheets and on our drum labels.

Midland has also undertaken a program to submit Material Safety Data Sheets to you prior to the initial shipment of our products. In addition to this, as our Material Safety Data Sheets are revised and/or updated, we will provide you with an updated version.

Thank you for your continued interest in Midland's high quality products.

Yours truly,

Stephen D. Morris
Manager
Regulatory & Legal Affairs

[illegible] - [illegible] SECRET [illegible] DIPLA[illegible]/DEXTER CORP.
[illegible] SAFETY DATA SHEET
PAGE 1 OF 2

ORIGINAL (Red)

DATE PREPARED : 1/3/86 PREPARED BY : K BUNTON

SECTION I

MANUFACTURER'S NAME: [illegible], THE DEXTER CORPORATION
STREET ADDRESS : [illegible] EAST [illegible] STREET [illegible], ILLINOIS 60085
TELEPHONE : (312) 623-[illegible] TWX: (312) 679-6967
MANUFACTURER'S CODE: [illegible]
TRADE NAME : CLEAR COATING

SECTION II - HAZARDOUS INGREDIENTS

INGREDIENT(S)	CAS NO.	WEIGHT PERCENT	TLV		VAPOR PRES MM HG @20C
XYLENE	1330-20-7	20-30	100	(PPM)	21.0
CYCLOHEXANONE	100-[illegible]-1	20-30	50	(PPM)	3.4
METHYL ETHYL KETONE	78-[illegible]-3	10-20	200	(PPM)	75.0
ETHYL ALCOHOL	71-[illegible]-5	<10	100	(PPM)	4.4
METHYL ISOBUTYL KETONE	10[illegible]-10-1	<10	100	(PPM)	15.0

SECTION III - PHYSICAL PROPERTIES - FIRE AND EXPLOSION HAZARDS

FLASHPOINT FOR [illegible] = [illegible] EG. F SETAFLASH CC LFL: 1.1
DOT CATEGORY = [illegible]
OSHA CLASSIFICATION = [illegible]
VAPOR DENSITY: HEAVIER THAN AIR.
EXTINGUISHING MEDIA: USE [illegible], FOAM, DRY CHEMICAL, OR CARBON DIOXIDE.

SECTION [illegible] - HEALTH INFORMATION

OVER EXPOSURE BY INHALATION MAY CAUSE IRRITATION OF THE RESPIRATORY TRACT, HEADACHE, DIZZINESS, OR [illegible].

SKIN OR EYE CONTACT: IRRITANT TO THE EYES AND SKIN.

EMERGENCY AND FIRST AID PROCEDURES: INHALATION: REMOVE FROM EXPOSURE. EYE CONTACT: FLUSH IMMEDIATELY WITH LARGE AMOUNTS OF RUNNING WATER FOR AT LEAST 15 MINUTES. SKIN CONTACT: REMOVE CONTAMINATED CLOTHING AND WASH SKIN WITH SOAP AND WATER. INGESTION: [illegible]. IF NECESSARY, CONSULT A PHYSICIAN FOR ANY OF THESE CONDITIONS.

SECTION [illegible] - REACTIVITY DATA

STABILITY: STABLE. HAZARDOUS DECOMPOSITION BY-PRODUCTS: FUMES MAY CONTAIN [illegible]. MAY PRODUCE HAZARDOUS FUMES WHEN HEATED TO DECOMPOSITION AS IN WELDING.

SECTION [illegible] - SPILL OR LEAK PROCEDURES

REMOVE ALL SOURCES OF IGNITION, AVOID CREATING VAPORS, VENTILATE AREA, AND REMOVE WITH INERT ABSORBANT AND NON-SPARKING TOOLS. DISPOSE OF IN ACCORDANCE WITH LOCAL, STATE, AND FEDERAL REGULATIONS. BEFORE ATTEMPTING TO CLEAN UP SEE SECTION [illegible].

SECTION [illegible] - [illegible]

[illegible] CHEMICAL MECHANICAL RESPIRATOR. [illegible] APPROVED CHEMICAL MECHANICAL FILTERS. [illegible] USE NIOSH APPROVED AIR LINE TYPE RESPIRATORS OR HOODS.

VENTILATION: PROVIDE GENERAL DILUTION OR LOCAL EXHAUST VENTILATION TO KEEP TLV AND LEL BELOW ACCEPTABLE LIMITS AND TO REMOVE DECOMPOSITION PRODUCTS.

PROTECTIVE EQUIPMENT:GLOVES ARE REQUIRED FOR PROLONGED OR REPEATED CONTACT. USE SAFETY EYEWARE DESIGNED TO PROTECT AGAINST SPLASH OF LIQUIDS.

DO NOT TAKE INTERNALLY. CONTAINERS SHOULD BE GROUNDED WHEN POURING. AVOID FREE FALL OF LIQUID IN EXCESS OF A FEW INCHES. MAKE SURE THE DRUM IS COMPLETELY EMPTY BEFORE ATTEMPTING TO WELD OR BRAZE. THE DRUM SHOULD BE INDUSTRIALLY CLEANED PRIOR TO REUSE. DO NOT FLAME CUT, BRAZE, OR WELD WITHOUT A NIOSH APPROVED RESPIRATOR OR APPROPRIATE VENTILATION.

SECTION VIII - ADDITIONAL INFORMATION

THOSE MATERIALS LISTED IN SECTION II WITH AN ASTERISK HAVE BEEN LISTED BY ONE OF THE FOLLOWING TESTING AGENCIES: NATIONAL TOXICOLOGY PROGRAM, INTERNATIONAL AGENCY FOR RESEARCH [illegible], OR OSHA.

[illegible]

NPCA HMIS CLASSIFICATION: HEALTH- [illegible], FLAMMABILITY- [illegible], REACTIVITY- 1.
SEE SECTION VII FOR PERSONAL PROTECTION EQUIPMENT.

MANUFACTURER'S NAME: CRUCIBLE CHEMICAL COMPANY	EMERGENCY TELEPHONE NO.: (803) 277-1284
ADDRESS (Number, Street, City, State, and ZIP Code): P. O. Box 6786, Greenville, SC 29606	
CHEMICAL NAME AND SYNONYMS: None	TRADE NAME AND SYNONYMS: FOAMKILL® 649
CHEMICAL FAMILY: Petroleum Hydrocarbon	FORMULA: Proprietary Blend
CAS REGISTRY NO.: Not applicable	EPA CODE DESIGNATION: Not applicable

SECTION II HAZARDOUS INGREDIENTS

PAINTS, PRESERVATIVES, & SOLVENTS	%	TLV (UNITS)	ALLOYS AND METALLIC COATINGS	%	TLV (UNITS)
PIGMENTS			BASE METAL		
CATALYST			ALLOYS		
VEHICLE			METALLIC COATINGS		
SOLVENTS			FILLER METAL PLUS COATING OR CORE FLUX		
ADDITIVES			OTHERS		
OTHERS					

HAZARDOUS MIXTURES OF OTHER LIQUIDS, SOLIDS, OR GASES		%	TLV (UNITS)
This specific chemical identity is being withheld as a trade secret			
and will be available to health professionals under certain specified			
situations. (Mist)	TWA		5mg/M^3
	STEL		10mg/M^3

SECTION III PHYSICAL DATA

BOILING POINT (°F.)	480°F	SPECIFIC GRAVITY (H_2O=1)	0.870
VAPOR PRESSURE (mm Hg.)	Not Known	PERCENT VOLATILE BY VOLUME (%)	Not Known
VAPOR DENSITY (AIR=1)	Not Known	EVAPORATION RATE (Buac =1)	<0.01
SOLUBILITY IN WATER	Dispersible		
APPEARANCE AND ODOR	Light cream fluid; mild hydrocarbon odor		

SECTION IV FIRE AND EXPLOSION HAZARD DATA

FLASH POINT (Method used): 125°C (257°F) T.O.C.	FLAMMABLE LIMITS	Lel: 1	Uel: 6
EXTINGUISHING MEDIA: Carbon dioxide, dry chemical, or foam			
SPECIAL FIRE FIGHTING PROCEDURES: None known			
UNUSUAL FIRE AND EXPLOSION HAZARDS: Can form combustible mixtures with air when heated to approximately 257°F.			

ORIGINAL
(Red)

SECTION V HEALTH HAZARD DATA

THRESHOLD LIMIT VALUE	5mg/M^3 for oil mist in air (OSHA Regulation 29 CFR 1910.1000)
EFFECTS OF OVEREXPOSURE	(See page 3)
EMERGENCY AND FIRST AID PROCEDURES	(See page 3)

SECTION VI REACTIVITY DATA

STABILITY	UNSTABLE		CONDITIONS TO AVOID
	STABLE	X	Heat, sparks and open flame
INCOMPATABILITY (Materials to avoid)	Strong oxidants like: liquid chlorine, concentrated oxygen, sodium or clacium hypochlorite.		
HAZARDOUS DECOMPOSITION PRODUCTS	Incomplete combustion can yield carbon monoxide and various hydrocarbons.		
HAZARDOUS POLYMERIZATION	MAY OCCUR		CONDITIONS TO AVOID
	WILL NOT OCCUR	X	

SECTION VII SPILL OR LEAK PROCEDURES

STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED	Eliminate source of spill and cover area with suitable absorbant and remove to waste containers.
WASTE DISPOSAL METHOD	Incinerate in furnace according to federal, state and local regulations.

SECTION VIII SPECIAL PROTECTION INFORMATION

RESPIRATORY PROTECTION (Specify type)	≤50mg/M^3 use respirator; >50mg/M^3 use breathing apparatus.		
VENTILATION	LOCAL EXHAUST	Acceptable	SPECIAL
	MECHANICAL (General)		OTHER
PROTECTIVE GLOVES	Neoprene gloves	EYE PROTECTION	Safety glasses
OTHER PROTECTIVE EQUIPMENT	Eye wash, safety shower		

SECTION IX SPECIAL PRECAUTIONS

PRECAUTIONS TO BE TAKEN IN HANDLING AND STORING	Do not store with strong oxidizers. Remove spills promptly, as they may make floors slippery.
OTHER PRECAUTIONS	**FOR INDUSTRIAL USE ONLY**

DATE ISSUED 11-11-85

The information contained herein is correct to the best of our knowledge and belief as of the date of publication of this Material Safety Data Sheet.

INTERNAL CODE IDENTIFICATION 31-012

HEALTH INFORMATION (EFFECTS OF OVEREXPOSURE)

INHALATION

Possible effects include headache, nasal and respiratory irritation, nausea, drowsiness, fatigue, peumonitis, pulmonary edema, central nervous system depression.

EYE CONTACT

Irritation.

SKIN CONTACT

Irritation; may cause dermatitis due to defatting of keratin layer.

INGESTION

Possible effects include headache, drowsiness, nausea, fatigue, peumonitis, pulmonary edema, central nervous system depression. Aspiration hazard.

EMERGENCY AND FIRST AID PROCEDURES:

INHALATION

Move exposed person to fresh air. If breathing has stopped, perform artificial respiration. Get medical attention as soon as possible.

EYE CONTACT

Immediately flush eyes with water for a minimum of 15 minutes, occasionally lifting the lower and upper lids. Get medical attention as soon as possible.

SKIN CONTACT

If clothing is soaked, immediately remove clothing and wash skin with soap and water. Launder clothing before wearing. Get medical attention promptly.

INGESTION

Do NOT induce vomiting. Get medical attention as soon as possible

The information contained herein is correct to the best of our knowledge and belief as of the date of publication of this Material Safety Data Sheet.

ORIGINAL
(Red)

Section V — HEALTH HAZARD DATA

THRESHOLD LIMIT VALUE See Section II

EFFECTS OF OVEREXPOSURE: EYES: Can cause severe irritation, redness, tearing, blurred vision

SKIN: Prolonged or repeated contact can cause moderate irritation, defatting, dermatitis.

BREATHING: Excessive inhalation of vapors can cause nasal and respiratory irritation, dizziness, weakness, fatigue, nausea, headaches, possible unconsciousness, and even asphyxiation.

SWALLOWING: Can cause gastrointestinal irritation, nausea, vomiting, diarrhea. Aspiration of material into lungs can cause chemical pneumonitis which can be FATAL.

Reproductive and blood disorders and birth defects have been observed in long term studies on laboratory animals with 2-Ethoxyethyl Acetate. Harmful if inhaled or absorbed through skin.

EMERGENCY AND FIRST AID PROCEDURES SKIN: Thoroughly wash exposed area with soap and water. Remove contaminated clothing and launder before re-use EYES: Flush with large amounts of water. GET MEDICAL ATTENTION!

BREATHING VAPORS. Remove individual to fresh air, administer oxygen and artificial respiration if necessary. GET MEDICAL ATTENTION! SWALLOWING: **DO NOT INDUCE VOMITTING**—GET MEDICAL ATTENTION

Section VI — REACTIVITY DATA

STABILITY ☐ UNSTABLE ☒ STABLE CONDITIONS TO AVOID: Avoid contact with strong alkalies

COMPATABILITY (*Materials to avoid*) Strong mineral acids and strong oxidizing agents.

HAZARDOUS DECOMPOSITION PRODUCTS Thermal decomposition or burning may produce carbon monoxide, carbon dioxide and various hydrocarbons.

HAZARDOUS POLYMERIZATION ☐ MAY OCCUR ☒ WILL NOT OCCUR

CONDITIONS TO AVOID

Section VII — SPILL OR LEAK PROCEDURES

STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED: Contain spill with absorbent material. Place any contaminated absorbent in approved waste containers.

WASTE DISPOSAL METHOD: Bury in a posted toxic substance landfill in accordance with all Local, State, and Federal regulations.

Section VIII — SPECIAL PROTECTION INFORMATION

RESPIRATORY PROTECTION If TLV of the product or any component is exceeded, a NIOSH/MESA jointly approved self contained breathing apparatus with a full face-piece operated in pressure demand or other positive pressure mode is advised. However, OSHA regulations also permit other NIOSH/MESA respirators under specified conditions. (SEE YOUR SAFETY EQUIPMENT SUPPLIER)

VENTILATION: Provide sufficient mechanical (GENERAL) and/or LOCAL exhaust ventilation to maintain exposure below TLV(s).

PROTECTIVE GLOVES: Chemical resistant, wear resistant gloves.

EYE PROTECTION: Chemical splash resistant coverall goggles in compliance with OSHA Regulations.

OTHER PROTECTIVE EQUIPMENT: Eye bath, safety shower, rubber apron, normal work clothing covering body.

Section IX — SPECIAL PRECAUTIONS

PRECAUTIONS TO BE TAKEN IN HANDLING AND STORING: Observe all hazard precautions given in the data sheet. Keep away from heat and open flame.

OTHER PRECAUTIONS: Containers of this material may be hazardous when emptied. Since emptied containers may retain product residues (Vapors, Liquid and/or Solid), ALL HAZARD PRECAUTIONS given in this Data Sheet MUST BE OBSERVED in handling empty containers.

RECEIVED, subject to the classifications and tariffs in effect on the date of the issue of the Bill of Lading,

at [illegible] Container 19 57 From

the property described below, in apparent good order, except as noted (contents and conditions of contents of packages unknown), marked, consigned, and destined as indicated below, which said carrier (the word carrier being understood throughout this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery at said destination, if on its own route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed, as to each carrier of all or any of said property over all or any portion of said route to destination, and as to each party at any time interested in all or any of said property, that every service to be performed hereunder shall be subject to all the terms and conditions of the Uniform Domestic Straight Bill of Lading set forth (1) in Official, Southern, Western and Illinois Freight Classification in effect on the date thereof, if this is a rail or rail-water shipment, or (2) in the applicable motor carrier classification or tariff if this is a motor carrier shipment.

Shipper hereby certifies that he is familiar with all the terms and conditions of the said bill of lading, including those on the back thereof, set forth in the classification or tariff which governs the transportation of this shipment, and the said terms and conditions are hereby agreed to by the shipper and accepted for himself and his assigns.

SECTION A - GENERAL DESCRIPTION OF THE INDUSTRIAL ACTIVITY

Metro Container Corporation is a closed-head drum reconditioning plant which processes used 55-gallon steel drums for ressale and/or disposal. Operations include unloading, paint stripping, label removal, cleaning, metal cleaning, phosphatizing, dedenting, shot blasting, leak testing, and painting per the process flow chart below:

Drums Unloaded → Drums Inspected → Drums Drained → Drums Pre-flushed And/or Chained → Exterior Paint Stripping/Cleaning (23% Caustic) →

Exterior Rinse → Chime Straightening → 1st Interior Cleaning (23% Caustic) → 2nd Interior Cleaning (23% Caustic) → 1st Interior Hot Rinse →

2nd Interior Hot Rinse → 1st Interior Metal Strip (28% HCl) → 2nd Interior Metal Strip (28% HCl) → 1st Cold Rinse → 2nd(Final) Cold Rinse →

Phosphatizing → Syphoning → Drying → Dedenting → Shot Blasting → Leak Testing →

Pre-drying → Painting → Baking → Warehouse → Loading

Waste products include solid waste, shot, shot blasting sludge, paper waste, DAF float filter cake waste, and waste oil primarily from refining operations.

Figure #1 is a 8½"x11" portion of a 7½ minute USGS map of the Marcus Hook, Pa-NJ-De SW/4 Chester 15 minute quadrangle showing the following:

(a) Location of the site and boundaries of the site.
(b) Location of surface drainage courses leading away from the site(Detailed in Figure #2) and major surface streams and tributaries near the site.
(c) Public/private groundwater supplies are not in the vicinity of the site.
(d) Public/private surface water intakes are downstream of the point where the BP Oil outfall/Stoney Creek joins the Delaware River. The intakes are used soley for industrial purposes such as cooling tower make-up, process water, etc as far as can be determined.

Figure #2 shows the following:

(a) A general layout of the site.
(b) Property boundaries.
(c) Areas occupied by manufacturing facilities.
(d) Raw materials storage.
(e) Loading and unloading areas.
(f) Waste handling, storage and treatment facilities.
(g) Drains/pipes which lead away from potential leak of spill areas.
(h) Outfall pipes which discharge to Stoney Creek/BP Oil outfall tributary.
(i) Secure and open access areas.
(j) Entrance and exit areas to the site.

SECTION B - DESCRIPTION OF EXISTING EMERGENCY RESPONSE PLAN(S).

An existing plan (PPCP) was submitted on June, 1982 which is currently in effect and will be superceeded by the PPC plan submitted herin. A copy of this plan is attached.

ORIGINAL
(Red)

SECTION C - ORGANIZATIONAL STRUCTURE FOR IMPLEMENTATION OF PPC PLAN

The following personnel are listed according to duties assigned:

Duties	Personnel
(1) Materials inventory - Identification of materials and wastes	Peter Cabrey Steve Zubrin
(2) Identification of potential spill sources	Gardner Flynn
(3) Establishment of spill reporting procedures	Norman Backus
(4) Visual Inspection Programs	Michael Morrissey
(5) Review of past incidents, spills and counter-measures utilized	Gardner Flynn
(6) Implement goals of PPC Plan	Sidney Levy
(7) Coordinate activities for	
(a) Spill clean-up	Sidney Levy
(b) Notification of authorities	Steve Zubrin
(c) Establishment of training programs	Gardner Flynn
(8) Periodically review, evaluate PPC plan at regular intervals with changes as necessary.	Sidney Levy, Gardner Flynn
(9) Review new construction and process changes relative to PPC plan.	Sidney Levy, Gardner Flynn
(10) Evaluate effectiveness of the overall PPC plan and make recommendations to management.	Gardner Flynn

SECTION D - MATERIAL AND WASTE INVENTORY

Stroage facilities are shown on Figure #2 for the materials and tankage listed below:

Tank #	Horizontal(H)/ Vertical(V)/Rect(R)	Material(s) Stored	Capacity(Gal)	Materials of Construction
1	V	HCl(28-32%)	3,500	Fiberglass
2	V	HCl(23-32%)	4,500	Polypropylene
3	V	HCl(28-32%)	4,300	Polypropylene
4	V	Alum(50%)	6,300	Polypropylene
5	V	Caustic(50%)	5,800	Carbon Steel
6	H	Caustic(50%)	5,000	Carbon Steel
7	H	Toluol	1,500	Carbon Steel
8	H	#5 Fuel Oil	6,000	Carbon Steel
9	H	#5 Fuel Oil	5,000	Carbon Steel
10	R	Waste Oil	500	Carbon Steel
11	H	Waste Oil	1,000	Carbon Steel
12	H	Caustic(23%)	8,000	Carbon Steel
13	H	Caustic(23%)	10,000	Carbon Steel
14	H	Waste Oil	20,000	Carbon Steel
15	H	DAF Sludge	20,000	Carbon Steel
16	R	DAF Sludge	225,000	Concrete
16A	R	Wastewater	50,000	Concrete
17	R	Wastewater	25,000	Concrete
Area I		Paints	25x55-gallon drums	Steel
Area J		Chemicals	6x55-gallon drums	Steel
		"	Palletized Bags	
			Fibre Drums	

Material safety data sheets are attached for the above materials.

SECTION E - SPILL & LEAK PREVENTION & RESPONSE

ORIGINAL (Red)

The following areas indicated on Figure 2 show areas where potential leaks can occurr, construction of containment, factors causing leaks, preventive measures and emergency measures:

Area	Tanks	Material Handled/Stored	Containment Construction	Factors Causing	Preventive Measures	Emergency Measures
A	1,2,3, 4,14,15, 17	Alum(50%) HCL(30%) Waste Oil	Earthen	Tank Overflow Leaks	TT Unloading Procedures	Pump into Tank #17
B	16,16A	DAF Sludge Wastewater	Concrete	Tank Overflow Leaks	Operational Procedures Inspections	Pump to Tank 17 via tank 16A
C	8,9	#5 Fuel Oil	Concrete	Leaks Overflow	Tank Inspections Unloading Procedures	Pump to WWTP Via Floor Drain
D	5,6	Caustic(50%)	Earthen	Tank Overflow Leaks	Tank Inspections Unloading Procedures	Pump to Tank 17 via Sump or Used Caustic Tank
E	9,10	Waste Oil	Earthen	Tank Overflow Leaks	Tank Inspections	Pump to WWTP via Tank #17 Shovels, Absorbant
F	12,13	Used Caustic Clarified Caustic(23%)	Concrete	Tank Leak Overflow	Tank Inspections Operating Procedures	Pump to Empty Tank/Wash down to floor drains to WWTP
G	7	Toluol	Concrete	Tank Leak Overflow	Tank Inspections Unloading Procedures	Pump to Drums
H	Drum Processing	Recycle Water Caustic(23%) HCl(30%)	Concrete Drainage Ditch	Tank Overflow Leaks	Operating Procedures Tank Inspections	Shut down process Drain to WWTP via Tank #17
I	Paint Storage	Paint	Concrete Floor Cinder Block Wall	Spills	Drip pans absorbant	Brooms, shovel absorbant

ORIGINAL (Red)

SECTION F - MATERIAL COMPATABILITY

(1) Materials of construction - All material handling, process and storage equipment are compatable with materials utilized in the process. Typical materials of construction and materials handled are as follows:

Process tanks/pumps/storage tanks/pipes	Process Material
CPVC, reenforced fiberglass, machined or molded fiberglass, teflon, polypropylene, high density polyethlyene	HCL (28-32%)
Carbon steel, CPVC	Caustic Soda (50%)
Carbon steel	Toluene
Carbon steel CPVC	Wastewater, sludge

(2) Process Stream Compatibility/Effects of Mixing

(a) Caustic soda with HCl - Effects are minimal to non-existant. Heat is produced with the by-products of NaCl + H_2O. The effect of increased salinity has minimal corrosive effects as it is not normally present and would have to be present over a long period of time to cause incompatibility problems with equipment materials of construction.

(b) HCl + phosphatizer solution - Reaction produces H_2NO_3 which, again, is not present normally nor over a long period of time. It does not cause compatability problems with equipment.

(c) Other combinations do not cause any reactions to occur under system process conditions or when inadvertantly mixed.

(3) Cleaning of pipes, vessels, pumps, etc. before re-use - All equipment is flushed at least 1X per week with water to remove sludge, resins, etc which have deposited in process equipment and to prepare equipment for repairs.

(4) Prevention Practices - HCl and caustic are segregated systems. The only time contact is made is improper dumps to the waste treatment system and even under these conditions does not harm equipment. Dumps of this nature are quickly diluted with waste rinse water reducing any heat produced to a harmless level.

(5) Compatability with Coatings - All tanks, structures, pumps, etc are painted with corrosion-resistant coatings wherever possible. Reactions described above do not cause incompatability problems with process or handling/storage equipment.

ORIGINAL
(Red)

SECTION G - INSPECTION AND MONITORING PROGRAM

Visual inspection are performed daily on pumps, valves, fittings, transfer lines, nozzles, pipes and hoses for leaks, spills and general condition. Production equipment is observed while in operation especially pressure lines while it is not necessary to test or observe storage tank systems as they are gravity systems. Condition of any diking and area inside the diking is inspected for general condition. The following areas are inspected regularly for problems or potential problems:

(1) Production Area
- (a) Pre-flush tanks
- (b) Chainer tanks
- (c) Exterior caustic(23%)
- (d) Exterior caustic hot rinse.
- (e) 1st caustic(23%), 2nd caustic(23%)(Interiors).
- (f) 1st caustic hot rinse, 2nd caustic hot rinse (Interiors).
- (g) 1st acid(28%) Interior, 2nd acid(28%) Interior.
- (h) 1st cold rinse, 2nd(final) cold rinse (Interiors).
- (i) Phosphatizer (Interiors)

(2) Chemical storage areas - Tanks 1-6.
(3) Fuel oil storage area - Tanks 8-9
(4) Waste oil storage area - Tanks 10-11
(5) Waste system - Tanks 14,15,16.
(6) Waste Treatment System
- (a) #1 pumphouse
- (b) #2 pumphouse
- (c) DAF system
- (d) Caustic clarification system
- (e) Pre-coat filter system
- (f) Filter cake dumpster

Most inspections are performed during operating hours in connection with production where the line is monitored continuously. In the waste treatment area logs are maintained for all chemical usages, condition of tanks, etc to provide for proper supply as well as monitoring for potential spills.

Spill or leaks in the production area drain into the waste treatment system and are limited to preclude direct contamination of ground or surface waters or soil contamination, however, all chemicals and/or systems are treated equally.

ORIGINAL (Red)

SECTION H - PREVENTIVE MAINTENANCE

Equipment systems identified in Section G are maintained on a schedule which depends on expected equipment life, operating hours and/or result of wear noticed during regular inspections. The following areas are monitored on a preventive program as follows:

(1) Production Area
   (a) All tanks are cleaned 1-2X per week of all dirt, sludge and debris inspected and repaired if necessary.
   (b) Pumps are inspected, repacked and replaced/repaired as wear indicates.
   (c) Flanges and fittings are inspected and replaced, repacked or repaired.
   (d) Nozzles are inspected and replaced if necessary.
   (e) Hoses are inspected especially the fittings and replaced if necessary.
   (f) Control valves and manual valves are inspected and replaced/repaired as necessary.

(2) Chemical storage -(Tanks 1-6). Flanges, valves and fittings are inspected regularly for signs of leakage and repacked, repaired or replaced as necessary. All materials of construction are resistant to corrosion so as to preclude corrosion. No hydrostatic tests are necessary as all chemical storage systems are gravity feeds.

(3) Fuel oil storage area - (Tanks 8-9). Valves and fittings are inspected, repacked or replaced per regular inspections. Tanks and piping are inspected for corrosion and replaced if necessary.

(4) Waste oil storage area - (Tanks 10,11). Regular inspections are made for corrosion and tanks or piping are repaired as necessary.

(5) Waste System storage - (Tanks 14,15,16).
   (a) Tanks 14,15 are inspected regularly for leaks and repaired if necessary. Tank 15 is out of service and is scheduled to be emptied and and demolished.
   (b) Tank 16 is inspected for structural integrity and repaired if necessary.

(6) Waste Treatment System.
   (a) #1 Pumphouse - Oil skimmers are inspected and repaired if necessary. Clow pumps are inspected daily and repaired. Valves and flanges are inspected for leaks and repaired if necessary.
   (b) #2 Pumphouse - Pump, fittings, flanges and valves are inspected regularly and repaired/replaced as necessary.
   (c) DAF System - System is in almost continuous operation. Parts are stocked and replaced on a time-available basis. Leakage from pumps valves, flanges and fittings is contained by concrete floor and retaining wall and pumped back into the treatment system as is the production area.
   (d) Caustic Clarification System - Same as above.
   (e) Pre-Coat Filter System - Same as above.
   (f) Dumpster - The dumster containing the filter cake material discharged from the pre-coat filter is checked regularly and a new dumpster is delivered before the existing one is full.

ORIGINAL (Red)

SECTION I - HOUSKEEPING PROGRAM

The housekeeping program is designed to utilize the type of practices which reduce accidental spills and safety hazzards. The following practices are in effect by area:

(1) Production Area - During and after production hours the following is performed as necessary:
   (a) Clean-up labels, bungs, etc from all floors.
   (b) Wash down floors and equipment to drains to WWTP.
   (c) All floors are swept periodically to remove dirt, shot and debris.

(2) Boiler Room
   (a) Chemical storage area.
      1 - Liquids: Drums of material are stored neatly upright and when in use, on drum racks with drums equipped with self-closing spigots. Drip pans are placed under each drum and surrounded with chemical absorbant to prevent potential spills from being tracked to other areas. Spills which do occur are swept up and removed to the WWTP for storage.
      2 - Powders - Bags are pallatized and kept neatly stored with any drums of powdered materials. Spills are swept up to prevent tracking to other areas and disposed of in the WWTP.
   (b) Oil Spills - Chemical absorbant is placed around the oil pump area to prevent tracking to other areas. Periodically, the absorbant is swept up and replaced with new absorbant.
   (c) Floors are kept free of accumulations of material which could cause tracking into adjacent areas.

(3) Maintenance Shop - Floors are maintained so as to prevent tracking of oil, grease, etc to other areas. Oil, cleaners, etc are stored so as to prevent spillage.

(4) Garage, Compressor and Storage Area - Floors are kept swept and chemical absorbant is used where necessary to absorb oil spills. Oil drums are stored neatly in an upright position.

(5) Paint Room - Paint and solvent drums are stored neatly in an upright position. Paint spills are cleaned up promptly to prevent tracking to other areas and fire hazzard. Floors are swept periodically.

(6) Waste Oil Storage Area - Dikes are kept free of vegetation and repaired of any damage. Spills are promptly cleaned up.

(7) Waste System Storage Area
   (a) Diking is maintained free of vegetation and repaired when damaged.
   (b) Spills are promptly cleaned up.
   (c) Tanks are kept free of external debris.
   (d) Floors in #1 and #2 pumphouses are cleaned periodically and flushed to the WWTP.
   (e) Dumpsters are kept covered while not being filled.

(8) Chemical Storage Area
   (a) Spills are removed promptly and flushed to the WWTP for disposal.
   (b) Tanks are kept free of external debris.
   (c) Diking is kept free of vegetation and repaired if damaged.

(9) Waste Treatment System Area(DAF room area)
   (a) Pre-coat filter area - Accidental liquid spills are flushed immediately to the WWTP. Solid pre-coat cake and cake solids are deposited in 55-gallon drums for disposal in dumpsters. Cake which overflows drums accidentally is shoveled up into drums for disposal in dumpsters.

ORIGINAL (Red)

(b) DAF System - Liquid and powdered spills are flushed to the WWTP sump to return for treatment. Trash, bungs etc are removed and floors are kept free of heavy sludge.

(c) Yard surrounding building is kept free of debris and trash.

(10) Drum Storage Areas - Drums are stored neatly in a horizontal position with bungs on tightly to prevent any leakage. Spills which occur due to leakage are promptly cleaned up. Scrap drums are stored in a separate area and are drained and flushed prior to storage. Scrap drums which are crushed for disposal are stacked neatly and placed in dumpsters for disposal.

(11) Conveyor Area - Drums are loaded from trailers onto the conveyor in an upright position so as to preclude drainage or spills. Chemical absorbant is used to remove any accidental spills which do occur either in the trailers or in the area of unloading. Label remover drums in the area are stored in upright positions and the drums in use is on a drum rack with a self-closing spigot. The area under the spigot is protected with a pan and chemical absorbant is used to clean up any spills.

ORIGINAL
(Red)

SECTION J - SECURITY

Only authorized personnel are permitted access to chemical transfer, control valves and chemical addition points. Areas include, but are not limited to chemical storage areas, process areas, waste treatment pump stations, etc. Where control valving is located in control buildings, the buildings are padlocked and only authorized personnel have keys.

The plant site is enclosed by a chain link fence with gates. Plant production schedules dictate that personnel are on site 24 hours/day, 5 days/week. On weekends or non-production days(at least 2 days/week) the gates are closed and locked. The plant is periodically checked during off hours by local police and plant personnel to report any unusual activity in the plant complex area and waste treatment plant.

Plant personnel are present during all loading/unloading operations to assure that proper procedures are followed to prevent spills or accidents.

ORIGINA
(Red)

SECTION K - EXTERNAL FACTORS

ORI
(Red)

Power outages, floods and severe weather have no effect on the storage of materials in storage tanks as chemical transfer from storage tanks is gravity or pumps. The exception is the waste plant which cannot process waste water or clarify caustic without pumps.

The site is located above the 100-year flood plain and temperature ranges do no present a factor in freezing of tank contents.

During strikes, management personnel would operate equipment to remove material from the containment areas, operate the waste plant or contact clean-up services as required.

ORIGINAL
(Red)

SECTION L - INTERNAL & EXTERNAL COMMUNICATIONS OR ALARM SYSTEMS

The industrial complex is equipped with the following communications/alarm systems:

(1) American Communications phone system with phones located throughout the complex. The phones are equipped to allow paging of key plant personnel. Each phone has a list of emergency contact numbers including fire, police and rescue.

(2) National Guardian Security Services maintains an alarm system and notifies the appropriate emergency personnel and/or agency as follows:

Item	Function/Alarm	Code	Indicator
(a) Boiler	safety shutdown	234	1
(b) Boiler	low water	"	2
(c) Waste storage tank	high level	"	3
(d) Paint storage room	water flow	411	1
(e) Small shed	water flow	"	2
(f) CO_2	alarm	"	3
(g) Paint storage room	low air pressure	"	5
(h) Small shed	" " "	"	6
(i) Gate valves		"	7

SECTION N - LIST OF EMERGENCY COORDINATORS

Coordinator	Address	Telephone #
Steve Zubrin		(609)853-1543
Sidney Levy		(302)798-6466
Gerry Butler		(215)671-0798
Mark Daniels		(609)268-9456
Norman Backus		(302)762-3019

SECTION O - DUTIES AND RESPONSIBILITIES OF THE EMERGENCY COODINATOR

ORIGINAL (Red)

Whenver there is an imminent or actual emergency, the emergency coordinator immediately:

(1) Activate alarms by the paging system and/or plant whistle.
(2) Notify the appropriate local emergency response agencies including the Pa DER.

Whenever there is a discharge, fire, or explosion, the emergency coordinator immediately must identify the character, source, amount and extent of emmitted or discharged materials. He also must determine the possible hazards to human health and/or the environment either directly or indirectly.

If the emergency coordinator determines that the emergency will threaten human life and/or the environment, he will immediately notify local response agencies and indicate if evacuation of local areas is advisable; and notify the Pa DER by telephone at 717-878-4343 and the National Response Center at 800-424-8802 and report the following:

(1) Name of the person reporting the incident.
(2) Name and location of the installation.
(3) Phone number where the person reporting the spill can be reached.
(4) Date, time, and location of the incident.
(5) A brief description of the incident, nature of the materials or wastes involved, extent of any injuries, and possible hazzards to human health and/or the environment.
(6) The estimated quantity of the materials or wastes spilled.
(7) The extent of contimination to air, water or land.

During an emergency, the emergency coordinator must take all reasonable measures to ensure that the fire, explosion, emmssion or discharge do not occur, recurr or spread to other areas and contact other materials or wastes in the industrial complex. These measures include, but are not limited to stopping manufacturing processes or operations, collecting and containing released materials or wastes, and removing or isolating containers.

If production is stopped, the emergency coordinator must ensure that adequate monitoring is conducted for leaks, ruptures, pressure build-up, gas generation in tanks, valves, pipes or other equipment as appropriate.

After the emergency, the emergency coordinator with Pa DER approval must provide for treating, storing or disposing of residues, contaminated soil, etc as deemed appropriate.

The emergency coordinator must insure that in the affected areas of the plant complex that no material or waste incompatible with the emmitted or discharged residues is processed, stored, treated, or disposed of until clean-up procedures are completed: and, all emergency equipment listed in the PPC Plan is returned to its original ready status before operations are resumed.

Within 15 days after the incident, the installation must submit a written report on the incident to the PA DER which includes the following:

(1) Name, address, and telephone number of the individual filing the report.
(2) Name, address, and telephone number of the installation.
(3) Date, time, and location of the incident.
(4) A brief description of the circumstances causing the incident.
(5) Description and estimated quantity by weight or volume of materials or wastes involved.
(6) An assessment of any contamination of land, water, or air that has occurred due to the incident.
(7) Estimated euantity and disposition of recovered materials or wastes that have resulted from the incident
(8) A description of what actions the installation plans to take to prevent a similar occurrence in the future.

SECTION S - EVACUATION PLAN

Evacuations are signalled by several three short blasts on the plant whistle and/or the plant paging system. The whistle and paging system are strategically located in major areas where emergencies can arise.

Primary evacuation routes are marked as required by fire and federal regulations. When the signal is given, all personnel proceed to the nearest exit and proceed towards the front of the plant for a head count. If rescue is required, rescue squads will aid in evacuation if it is determined all employees are not accounted for.

Alternate evacuation routes are dictated by proximity to primary routes and best avenue of excape.

Periodic drills are held at least once/quarter.

(215)822-8996

ORIGINAL (Rcd)

ORIGINAL (R

SECTION V - POLLUTION INCIDENT HISTORY

Date(s)	Incident	Corrective Action	Preventive Action	Date Completed
2/18/86	Flow of unidentified red material to BP waste plant effluent overflow portion of Stoney Creek.	Spill containment by Snow Environmental Services and identification of source	Source eliminated by sealing drain pipe in boiler room/chainer area	
	Flow of water seepage from same area as above but black in appearence	Locate source as flow from drum leak test water and non-contact cooling water. Divert water flow to WWTP.	Construct pipeline for discharge to outfall 001 at Stoney Creek Apply for NPDES permit for discharge to above outfall.	
	Spill from large concrete holding tank overflow and migration of same into Stoney Creek via heavy rain.	Dam up area of immediate overflow. Pump area to WWTP transfer tank Waste Conversions pump 2' from large concrete tank	Construct earthen dike around concrete tanks. Install level indicator monitor to indicate high level-transfer large tank to small tank to pump to WWTP to maintain 2' of freeboard in large concrete tank.	
	Spill(s) in diked area of Pumphouse #1 and chemical storage tanks	Monitor levels in #1 pumphouse tank, oil skimmer storage tank and DAF float storage tank to prevent overflows. Filter DAF float from storage tank to lower level and monitor.	Install level controls to transfer to small concrete tank at preset level to prevent overflow. Filter DAF float directly from DAF sludge collection tank in recycle room to keep sludge out of diked area around #1 pumphouse.	
	Various spills in yard & plant.	Clean-up with shovels etc	Refer to Housekeeping Program (Section I).	

SECTION W - IMPLEMENTATION SCHEDULE

Item	Corrective Action	Completion Date(s)
(1) Water flow/seepage into Stoney Creek especially during periods of heavy rain.	Dig up soil in area of discharge and excavate area to locate source.	
(2) Spills from all concrete holding tanks and steel tanks in diked areas.	Construction/operation of WWTP to discontinue the use of subject tanks. Emptying of tanks via the new WWTP.	
(3) Spills in yard and plant.	Implement housekeeping program. Implement preventive maintenance program.	
(4) Spills and/or potential spills from chemical storage tanks.	Construct concrete containments.

COMMENTS:
FORM NO. 10, 11, & 12

DISPOSAL FACILITY Metro Container
Open-head Drum incinerator

DATE August 18, 1987

During the August 18, 1987 inspection, the following violations were observed:

1. Incinerator area should be maintained in a cleaner manner. Residues should be kept off of the floor.

2. Standing water should not exist on the floor. The water had an oily sheen on it. Floors should be maintained and cleaned daily.

3. Residue storage container should be tarped when not in use.

HAZARDOUS WASTE INSPECTION REPORT
Generators -Part A

Date of inspection August 18, 1987 Time start 1:00 Time finish 3:30

Name of inspector Brian Boyd

Company, installation name Metro Container Corp.

Location Second + Price Sts. Trainer, Pa 19013

County Delaware Municipality Trainer Boro

Identification number PAD044545895

Name of responsible official Sidney Levy

Title President

Mailing address Second + Price Sts. Trainer, Pa 19013

Area code and phone no. (215) 485-6660

Name of person interviewed Terry Butler, Sidney Levy

Title Operations manager, President

Mailing address (if different from above) Same

Area code and phone no.

1. Current waste handling method: LQG + PBR facility

   a. ☒ On-site ☒ treatment, ☐ storage, ☐ disposal

   b. ☐ On-site ☐ use, ☐ reuse, ☐ recycle, ☐ reclaim

   c. ☒ Off-site ☐ treatment, ☐ storage, ☒ disposal

   d. ☒ Off-site ☐ use, ☐ reuse, ☒ recycle, ☐ reclaim

2. Amount of hazardous waste produced:

   a. unknown kg./mo.

   b. _____ kg./yr.

3. Types of hazardous waste produced by Hazardous Waste Number:

   Corrosives
   Flammables

4. Are hazardous wastes transported off-site by the generator? ☐ Yes ☒ No

the property described below, in apparent good order, except as noted (contents and condition of contents of packages unknown), marked, consigned, and destined as indicated below, which said carrier (the word carrier being understood throughout this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery at said destination, if on its route, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed, as to each carrier of all or any of said property over all or any portion of said route to destination, and as to each party at any time interested in all or any of said property, that every service to be performed hereunder shall be subject to all the terms and conditions of the Uniform Domestic Straight Bill of Lading set forth (1) in Uniform Freight Classifications in effect on the date hereof, if this is a rail or a rail-water shipment, or (2) in the applicable motor carrier classification or tariff if this is a motor carrier shipment.

Shipper hereby certifies that he is familiar with all the terms and conditions of the said bill of lading, including those on the back thereof, set forth in the classification or tariff which governs the transportation of this shipment, and the said terms and conditions are hereby agreed to by the shipper and accepted for himself and his assigns.
