Division of Surface Water

Biosolids Agronomic Rate Calculation Worksheet

General Information

Ohio EPA #	29-00312	
Field ID #	GRS-12-04	
Generator Name	Dovetail Energy	

Biosolids Data and Beneficial Use Methods

Ammonia Nitrogen	67400.00	mg/kg
Total Kjeldahl Nitrogen	105000.00	mg/kg
Total Phosphorus	43000.00	mg/kg
Organic Nitrogen	75.20	lbs/ton
Available Nitrogen	157.36	lbs/ton
Phosphate (P_2O_5)	98.47	lbs/ton
Will Immediate Incorporation / Injection be performed?	Yes	

Beneficial Use Site Information

Soil Phosphorus	43.00	ppm	Mehlich 3		
	37.84	ppm			
Please note that the agronomic rates and phosphorus index have been calculated within the *Calculated Agronomic Rates* section; however, based upon the above provided *Soil Phosphorus* result, you must utilize the most limiting factor or the *Phosphorus Index*:	The nitrogen agronomic rate, a phosphate beneficial use rate of <250 lbs/acre, a phosphate beneficial use rate of 256-500 lbs/acre if injected/incorporated within 24 hours of beneficial use or if there is >50% ground cover, or the Phosphorus Index.				
County	Greene				
Soil Type	Ockley silt loam, 2 to 6 percent slopes				
Hydrologic Soil Group	B				
Year 1	Crop 1	Crop 2	Crop 3	Crop 4	Crop 5
Crop Type(s)	Corn (Grain)				
Expected Crop Yield(s)(bu/acre or tons/acre)	180				
Year 2	Crop 1	Crop 2	Crop 3	Crop 4	Crop 5
Crop Type(s)					
Expected Crop Yield(s)(bu/acre or tons/acre)					
Year 3	Crop 1	Crop 2	Crop 3	Crop 4	Crop 5
Crop Type(s)					
Expected Crop Yield(s)(bu/acre or tons/acre)					
Year 4	Crop 1	Crop 2	Crop 3	Crop 4	Crop 5
Crop Type(s)					
Expected Crop Yield(s)(bu/acre or tons/acre)					
Year 5	Crop 1	Crop 2	Crop 3	Crop 4	Crop 5
Crop Type(s)					
Expected Crop Yield(s)(bu/acre or tons/acre)					
Crop Nitrogen Requirements (Year 1)	216	lbs/acre			
Existing Available Nitrogen		lbs/acre			
Non-Biosolids Nitrogen Application		lbs/acre			
Phosphate (P_2O_5) Fertilizer Application		lbs/acre			
Non-Biosolids Organic Phosphate (P_2O_5) Application		lbs/acre			
Biosolids Phosphate (P_2O_5) Beneficial Use	135.16	lbs/acre			
Total Organic Phosphate (P_2O_5) Fertilizer Application	135.16	lbs/acre			

Phosphorus Index

		Subvalue
Soil Loss	5 tons/acre/year	5
Connectivity to "waters of the State"	Concentrated flow does not leave the beneficial use site and is not adjacent to an intermittent or perenial stream.	0
Runoff Class - Slope Range	4-6%	3
Soil Phosphorus		2.65
Application - Phosphate (P_2O_5) Fertilizer		0
Method - Phosphate (P_2O_5) Fertilizer	None applied.	0
Application - Organic Phosphate (P_2O_5) Fertilizer		8.11
Method - Organic Phosphate (P_2O_5) Fertilizer	Immediate incorporation or applied on ≥80% cover.	0.5
Does runoff flow through a filter strip designed per USDA Ohio-NRCS Field Office Technical Guide Standard 393?	No	0
Total Phosphorus Index		**19.26**

Calculated Agronomic Rates

Nitrogen Agronomic Rate	1.37	dry tons/acre
i. Calculated Agronomic Rate	1.37	dry tons/acre
Single Year Phosphate Agronomic Rate	0.73	dry tons/acre
Multi-Year Phosphate Agronomic Rate	0.73	dry tons/acre
Phosphorus Index	Medium potential for phosphorus runoff. Use the Nitrogen Agronomic Rate.	

Beneficial Use Site Records

Quantity of Biosolids Beneficially Used	79.42	dry tons		
Phosphate (P_2O_5) Beneficially Used Per Acre	484.24	lbs/acre		
Acreage	32.3			
Date Biosolids Delivered to Beneficial Use Site	10/16/2017			
Dates of Beneficial Use	10/16/2017	to	10/19/2017	
Total Days Biosolids Stored at Beneficial Use Site	0.00	Days		
Date Signage Posted at Beneficial Use Site	10/9/2017		☐ Yes	is a permanent sign posted at the beneficial use site?
Date Signage Removed from Beneficial Use Site	10/26/2017		☑ No
