**Subject: Class B Biosolids Beneficial Use Site Authorization**

Dear Mr. Randles:

Ohio EPA received a request from Renergy, Inc. on behalf of Dovetail Energy to include the following site as part of the biosolids management program:

| Ohio EPA Site # | Field ID | County | Township |
|---|---|---|---|
| 80-00097 | UNS-01-01 | Union | Dover |

This 322-acre beneficial use site, owned by Tall Farms, LLC and operated by Lee Foos, is located southeast of the intersection of Springdale Road and Merry Road in Marysville. The beneficial use site's soil units consist of Blount silt loam and Pewamo silty clay loam. Soil analytical results indicate pH ranging from 4.5 to 7.7 S.U. and phosphorus ranging from 9 to 59 parts per million (ppm) Mehlich 3 extraction.

A review of the application and site was conducted by Ohio EPA. The application indicates that the requisite notifications and consents have been obtained. The review considered soil and landscape characteristics, isolation distances from residences, and the proximity to waterways and wells.

After a review of the application and Ohio Administrative Code (OAC) 3745-40-06, Ohio EPA hereby authorizes this site to be included as part of the Dovetail Energy Class B biosolids management program. This authorization is subject to conditions contained in the Dovetail Energy NPDES permit and OAC 3745-40. Highlights of these conditions are outlined below. Conditions contained in the NPDES permit and OAC 3745-40 may differ. In such cases, the more restrictive conditions from either the NPDES permit or OAC 3745-40 shall govern.

This site is authorized for the conditions present as of the date of this letter. The permittee shall evaluate this site prior to each beneficial use event to determine if any changes have occurred at or near the site that may affect the site restrictions. Changes shall be reported on the annual sludge report in accordance with OAC 3745-40-06(F).

**Specific Conditions**

1. All biosolids beneficially used at this site shall be injected beneath the surface of the ground or immediately incorporated into the soil. Biosolids that remain on the surface shall be incorporated within six hours.
