TECHNICAL ASSISTANCE TEAM FOR EMERGENCY RESPONSE REMOVAL AND PREVENTION
EPA CONTRACT 68-01-6669

TO:	Robert D. Kleopfer, Chief, CLQA	December 27, 1985
THRU:	Cliff J. Kirchmer, Region VII ATATL	TAT-07-F-01310
FROM:	T. S. Viswanathan, Region VII TAT Chemist	TDD #07-8510-49
SUBJECT:	Hexachloroxanthene Analysis on Syntex (Verona) Samples (#AK651-006 to 022)	PCS #5049

Nine samples were analyzed for 2,3,7,8-TCDD and hexachloroxanthene. Soil samples (10g) were extracted and cleaned up using the IFB-dioxin method. Nine ions (m/z, 351, 353, 355, 385, 386, 387, 388, 389 and 390) were monitored for hexachloroxanthene. Response factors for each of the ions of hexachloroxanthene relative to the m/z 332 and 334 ions of $^{13}C_{12}$-2,3,7,8-TCDD were obtained from quadruple injections of a standard solution containing these compounds. Quantitation of hexachloroxanthene was based on the sum of six ion-(m/z 385 to 390) intensities in most cases. In some cases, a lesser number of ions were used if interference or saturation was suspected. Details of the analytical methods are described in previous Weston-TAT reports on this subject.

The relative amounts of hexachloroxanthene and 2,3,7,8-TCDD vary widely in the nine samples analyzed in this batch. A summary of the results and copies of raw data are attached.

T. S. VISWANATHAN

DATA QUALIFIERS FOR EPA REGION VII

U not detected. For EPA VII lab data U is applied only in conjunction with detection limits. For contract lab data it is applied to contract required limits.

M The value indicated is below the quantitation limit but above the detection limit.

J The associated value is an estimated quantity because quality control criteria were not met.

I Analysis attempted but no result can be reported.
