Glenn Curtis U.S Environmental
P. Agency

I've read your piece in the paper
and I don't have much luck when
it comes to adding my two cents worth
on something like this. As I know
there are more than four sides to an issue
But to the point; pushing the surface mine
wastes back in the mines. Would it be
possible to push some of the garbage
trash in the mine pits like a sand-
wich and maybe would have to add
some lime to purify it in the pit. I am
just suggesting this as I don't have any
way to study it and maybe you do,
This would take care of some of our house
hold waste also providing it won't run
water back in wells, creeks, etc.
My Phone No. is 623 6942 and my
address is = Mrs. Anna Jensen
102 E. 2nd St. 64801, Joplin Mo.
Bye myself now. Hope this will be of some help.
