Seattle, WA 98109-1658

Dear Peggy,

Confirming our conversation of 12-14-95 we would like to request permission to process approximately 1500 gallons of decanted effluent (from cleaning operation) through our existing treatment system

The effluent has been segregated into two 600 gallon tanks and approximately six 55 gallon drums. Representative samples have been taken and lab results are enclosed.

Due to the Ph of the effluent (9Ph) we will add acid to lower the Ph to 7-8. This will optimize the metal removal process.

We would inject this fluid into the daily process flow over a time frame of 3-5 days (500-600 gallons per day). This time frame should allow us to remain below our maximum daily discharge limit of 3390 gallons per day. We would request to schedule this process for the week of 1-1-1996.

Sincerely,

Gerald A. Thompson
Environmental Assistant

GT/mkb

cc: J. Brown

Approved. Please perform your normal required self monitoring daily during this discharge.
