FILE: osm/141

DATE: 1/03/02 Thursday TIME: 2:30 - 3:30

CALL FROM/TO: Chris Rich

TITLE: Lawyer (Shaver Trans)

COMPANY: BBH Rycewicz & Chenoweth LLP

LOCATION: Portland Or.

PHONE NO: 503 221 - 2182

CC:

RE: OSM - Status of PA - Miscellaneous discussions

SUMMARY OF CALL:

- I returned Chris call regarding the status of the XPA/Pre-RI report. Due to the last minute background letter, request for additional photographs and the holiday schedule, the Pre-RI report will not be submitted until Jan 18th.

- Chris had question regarding:
  1. gw discharge & how it is viewed
  2. direct connections that have been made between oil sump and sediment problems?

"I stated there is a potential at this point ~~and~~ however (BBH) that additional data will be need to understand the nature and extent of the contamination at the site. This will be further evaluated in the RI phase(s) of the project."

~~By~~ (BBH) "I also explained that DEQ has, based upon the (→ over)

data collected to date, that OSM will need to conduct an RI to further understand the N & E of contamination at the site. OSM requested to do one more round of sampling at the site under a Pre-RI and complete the PA/XPA portions of the site (BBH) report prior to beginning the conceptual RI. W.P."

3. DEQ File organization: I briefly went over how the standard file organization has been layed out.

4. Chris used the word "ranking" "higher ranked sites" for the OSM site, and I cautioned him that DEQ is not ranking sites, we have done a prioritization as needed based on available data and to develope a logical systematic approach to evaluating the harbor area.

— BBH action item fax copy of DEQ comment letter that includes language that OSM needs to do an RI for the site. (5/30/01 dated letter)
