Updated DRAFT Proposed Discussion Topics (EPA) – 8/24/16

Phase 1

- Antidegradation of surface water
  - Plant Site
  - Mine Site
- Reasonable potential / Effluent Limits
- Conductivity – potential draft EPA criteria
- Demonstration of no discharge to waters of the U.S.
  - Mine Site
  - Plant Site
- 40 CFR Part 440.104 (Subpart J) (Allowable discharge of wastewater)
- Tailings basin area construction water management
- Flushing of legacy pollutants once trench is installed/operating
- Lessons learned from Ohio mining permit application reviews
- Communication, documentation, and record management process

Phase 2

- North flow path
- Mine Site & Plant Site Monitoring
  - Locations
  - Parameters
- Baseline exceedances of surface water standards (non-legacy)

Phase 3

- Performance verification of FTB seepage collection system
- Construction Stormwater and Industrial Stormwater coverage
  - CSW coverage vs. ISW coverage
- Sulfate discharge at plant site
  - 10 mg/L vs new standard
- Transportation corridor monitoring

*Topics for discussion are grouped by timing aspect and not necessarily in order of importance.
