TRADEBE
Environmental Services™

Hand Delivered

October 11, 2016

Mr. John Howard,
Senior Environmental Manager
Indiana Department of
Environmental Management
Northern Regional Office
300 North Michigan Avenue, Suite 450
South Bend, Indiana 46601

Re: Tradebe Treatment and Recycling, LLC Business and SDS System Information

Dear Mr. Howard:

Enclosed are the Tradebe Treatment and Recycling, LLC ("TTR") response associated with the Indiana Department of Environmental Management (IDEM) request for information as outlined in your email sent to Mr. Timothy Denhof, Tradebe Midwest EHS Manager. A second TTR response sent under separate cover included process information and was deemed Confidential Business Information. Submitted with this letter is a TTR Narrative Response and information associated with the following request items:

- Number 2, SDS Degreaser product;
- Number 4.c, Char manifest; and
- Number 4.d, Char Analysis.

Should you have any questions or require additional information, please contact me at 219.397.3951 or email me at: robert.vaughn@tradebe.com.

Respectfully,
Tradebe Treatment and Recycling, LLC

Robert Vaughn
EHS Manager

John Howard Request / Tradebe Treatment and Recycling, LLC

Response Narrative

On the following pages are the Tradebe Treatment and Recycling, LLC (Tradebe) responses to Mr. John Howard's, an Indiana Department of Environmental Management (IDEM) Inspector, requests for information regarding SDS operations. Mr. Howard made the requests in the email to Timothy Denhof, Tradebe EHS Midwest Manager.

Here is the IDEM requests for information emailed to Tradebe:

1. During PM, what is done with the sludge accumulated at the bottom of OWS in SDS 1 and tank 86, in SDS 2?

2. How much and what is the final disposition of the carbon from the air emissions canisters (Tradebe assumes this relates to SDS operations)?

3. *Looking for confirmation: is the degreaser product from the SDS units sold or is it given away?*

4. Plus the documentation we talked about and you're working on:
    a. *Mass Balance of material in & out*
    b. *Quantity of "process water" to fuel: Amounts and frequency.*
    c. (Last 10) char manifests & LDRs
    d. Char TCLP analysis results. If quarterly last 4, if yearly last 4.
    e. (Last 10) Bill-of-ladings to SMS recycling (information previously provided)
    f. *SDS approval criteria*
    g. (received blank)

Items in Italics are being provided under CBI protocol.

The following pages contain the Tradebe narrative responses to the IDEM requests. Documents, when applicable, are provided as Attachments to this narrative response. Information deemed as Confidential Business Information (CBI) is submitted under a separate cover letter and follows CBI protocol.

Solid Distillation System

The Solids Distillation System (SDS) is a separation technology that processes various types of waste in multiple physical states (e.g., solid and sludge) contaminated with organic solvents and hydrocarbons. The SDS unit processes these materials in containers, following a shredding stage. SDS uses indirect heat to change the physical state of the organics along with any moisture that may be contained in the waste; the recoverable material travels along a cylindrical tube.

The processed materials dried solids, along with the recovered metal (from the containers and /or waste) exit the back end of the unit, where they are separated. The recovered organics are condensed using water. This liquid stream is also separated into an aqueous phase and an organic phase that contains organic solvents that are sold as a commercial-grade degreasing agent.

As with any separation technology, this process has a certain efficiency that varies depending on a number of characteristics of the waste stream:

- Concentration of organics
- Nature and boiling point of those organics
- Physical state
- Moisture
- Particle size

Also, a number of process parameters do influence the efficiency of the separation process:

- Residence time
- Temperature
- Vacuum

This separation process takes place in the absence of oxygen to inhibit combustion of the organic compounds. The unit operates under a nitrogen blanket to further inhibit combustion. As organic solvents are placed into a vaporized state for recovery, minimizing oxygen concentration is of the outmost importance to avoid an explosion, since the presence of organics above their ignition temperature would explode if oxygen was present at significant concentrations.

It is important to note that the thermal process is indirectly heated. This, along with the temperatures and lack of oxygen minimize product decomposition and avoid combustion.

Tradebe Responses to John Howard's request by item:

1. During PM, what is done with the sludge accumulated at the bottom of OWS in SDS 1 and tank 86, in SDS 2?

   Tradebe Response: As discussed during the IDEM site visit, during maintenance activities of the recycling equipment, material (i.e. sludge) is removed from the equipment (e.g., OWS', process water tanks; Vapor recovery units). The material removed is pumped into a tanker and taken to Area 2 tank farm and transferred into the hazardous waste fuel tanks. Please note, that Tank 86 operates under 40 CFR 262 Generator's 90-day standards.

2. How much and what is the final disposition of the carbon from the air emissions canisters (Tradebe assumes this relates to SDS operations)?

   Tradebe Response: Spent carbon that is removed from air emission canisters (i.e., carbon absorption units) is removed from the air emission canisters and is manifested off site as hazardous waste for disposal at an alternate approved facility (i.e., incineration). A total of 18,300 pounds of carbon was used from January 1, 2016 to September 30, 2016 for SDSI and SDSII operations.

3. Looking for confirmation: is the degreaser product from the SDS units sold or is it given away?

   Tradebe Response: The SDS Degreaser product recovered from the recycling activities is sold and used by various organizations for its solvent properties. Economic benefit is also generated from Tradebe's brokered refinery waste streams into ESSROC. The composition and matrix of the refinery waste, as well as increased volume of these waste streams has become increasingly difficult for ESSROC processing equipment, causing maintenance and equipment downtime which threatens the future acceptance of these waste streams. After trial loads of the SDS degreaser, downtime of the processing unit was reduced. Therefore beginning January 2017, Tradebe's refinery waste customers price will increase to reflect the use of the SDS Degreaser in this new application.

Information associated with the sale of the degreaser is deemed Confidential Business Information (CBI) and is being provided under a separate CBI submittal.

4. Plus the documentation we talked about and you're working on:
   a. Mass Balance of material in & out

      Tradebe Response: As with other distillation units, the exact mass balance varies dependent on the parameters cited above in the SDS Flow Diagram. As an example, if paints are processed, the amount of recovered solvents would be different than if debris contaminated with solvents was processed.

      The thermal process does produce cracking of hydrocarbons into smaller molecules that cannot be condensed in the gas treatment system. These lighter gases exit the condensing stage to the flare, the air pollution control unit. As mentioned in the previous section, Nitrogen, an inert gas, is used to further inhibit combustion and/or explosive conditions in the unit. This inert gas passes through the system uncondensed.

      Tradebe is providing a SDS Flow Diagram with Mass Balance data under the CBI protocol.

   b. Quantity of "process water" to fuel: Amounts and frequency.

      Tradebe Response: Tradebe is providing the amount of process water that is removed from the SDS processes for the operating year 2015 under CBI protocol. As we explained during the inspection, process water is used to cool (condense) the organic vapors and return the vapors to a liquid. The contact cooling water is recycled through closed loop equipment to lower the temperature of the contact cooling water. The recycled contact cooling water is removed from a tank during normal activities to maintain the cooling system and to allow the ongoing processing of materials with various amounts of water content. Water withdrawals from the cooling system increases during summer months due to humidity in waste material as well as in the ambient air re-condenses in the recycling units and contact cooling water equipment.

   c. (Last 10) char manifests & LDRs

      Tradebe Response: Copies of the last ten (10) shipments of char from the Tradebe facility are being provided along with the associated Land Disposal Restriction notices sent along with the manifests.

      Several waste streams processed in the SDS recycling unit contains certain materials that at the processing temperatures can be pyrolyzed to produce char (solid residue). These includes: paper, plastic, cardboard, textiles. This pyrolysis process would produce a carbonaceous material that along with other solids that cannot be vaporized, such as

silica, metal oxides, and other inert high boiling point materials, will exit the system and make up the char.

Manifest Numbers:

016085425JJK	009892800FLE	016085424JJK	009892799FLE
016085422JJK	016085423JJK	016085421JJK	009892798FLE
016085420JJK	016085419JJK		

d. Char TCLP analysis results. If quarterly last 4, if yearly last 4.

Tradebe Response: Enclosed are the two (2) most recent Tradebe char solids analysis. Char Analysis reports:

- TestAmerica, J115311-1 UDS Level 2 Report, Box 15, dated 8/10/2016
- TestAmerica, J115312-1 UDS Level 2 Report, Box 18, dated 8/10/2016

e. (Last 10) Bill-of-ladings to SMS recycling

Tradebe Response: Tradebe provided a summary of the shipments for the metal pieces (i.e., shredded drum) that are recovered and recycled from the SDS units to IDEM in a September 30, 2016 response letter, Attachment D. The Shipment summary was marked confidential business information.

f. SDS approval criteria

Tradebe Response: Tradebe is providing approval criteria for material recycled in the SDS units. The information provided includes approval letters and profiles for material received and processed in the SDS units. Since the Approval letters and profiles contain sensitive business information the documents are being provided under a separate CBI submittal.

Profile Approval data associated with profile numbers:

100124830	16020170	160165-1	03134029
1100509	1000123154	PCIX201699	1000123393

g. (received blank)

Tradebe Response: No information for item "g" was listed in the email by the IDEM.

Comments
No additional comments.

Receipt
The sample was received on 8/4/2016 10:40 AM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 5.1° C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method(s) 3541: 3541 8270 Due to the matrix, the following sample(s) could not be concentrated to the final method required volume: 500-115311-1. The reporting limits (RLs) are elevated proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Analysis Requested

Preservation Codes: 8/4/16

A - HCL, B - NaOH, C - Zn Acetate, D - Nitric Acid, E - NaHSO4, F - MeOH, G - Amchlor, H - Ascorbic Acid, I - Ice, J - DI Water, K - EDTA, L - EDA, M - Hexane, N - None, O - AsNaO2, P - Na2O4S, Q - Na2SO3, R - Na2S2SO3, S - H2SO4, T - TSP Dodecahydrate, U - Acetone, V - MCAA, W - ph 4-5, Z - other (specify)

Other:

Sample Identification	Sample Date	Sample Time	Sample Type (C=comp, G=grab)	Matrix (W=water, S=solid, O=waste/oil, BT=Tissue, A=Air)	Field Filtered Sample (Yes or No)	Perform MS/MSD (Yes or No)	8270D - SVOC Standard List	8260 - VOC Standard List	Total Number of containers	Special Instructions/Note:
			Preservation Code:		X	X	N	N	X	
CHAR #15	8/2/16	9:00	G	S						

Possible Hazard Identification
☐ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☐ Unknown ☐ Radiological

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
☐ Return To Client ☐ Disposal By Lab ☐ Archive For _____ Months

Deliverable Requested: I, II, III, IV, Other (specify)

Special Instructions/QC Requirements:

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	5.1
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The sample was received on 8/4/2016 10:40 AM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 5.1° C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method(s) 3541: 3541 8270: Due to the matrix, the initial volume(s) used for the following sample(s) deviated from the standard procedure: 500-115312-1. The reporting limits (RLs) have been adjusted proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Definitions/Glossary

Client: Tradebe Treatment and Recycling, LLC
Project/Site: CHAR Box 18

TestAmerica Job ID: 500-115312-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	5.1
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Question 4.e

(Last 10) Bill-of-ladings to SMS recycling

(information submitted on September 30, 2016)

Question 4.e

(Last 10) Bill-of-ladings to SMS recycling

(information submitted on September 30, 2016)

Tradebe provided a summary of the shipments for the metal pieces (i.e., shredded drum) recovered from the SDS units to IDEM in a September 30, 2016 response letter, Attachment D. The Shipment summary was marked confidential business information.

Question 4.f

SDS approval criteria

Submitted under CBI protocol
