That's exactly what I was thinking. Ok to delay, but they need to expand the sampling program NOW and not wait a year.

Great minds....

Jim Soukup

I thought the same thing – here is my opinion.

My opinion: I am okay with postponing so that the GMZ is accurate but not okay with collecting the few samples under the existing GMP again. If they want to really designate a new GMZ based on the completion of the supplemental RI and understanding of the migration of contaminants they should collect another two full rounds of groundwater data from all site wells as they did in 2016 and any new wells proposed to fill in data gaps near boundaries.

They should propose a revised GMZ based on those two complete sampling rounds, the additional residential wells sampling data being collected, the PFAS data, additional sampling of the former drinking water wells and any newly identified well or newly installed source area or bedrock well data.

Simply sampling the same few monitoring wells will do nothing for the understanding of contaminant migration at this site based on what we know now.
