Flag: Follow up

Good morning,

Since the public notice for this permit closed we have been working on responses to comments. I have gotten the Appendix B (BACT) and Appendix C (modeling) revisions put to bed. We would appreciate it if you could review these documents and let me know if the responses to your comments are satisfactory.

I have attached the following documents:

39554 atsd epa section - This is a clip of the section of the Addendum to the Technical Support Document with your December comments on the permit, BACT analysis, and modeling. Changes to the permit language, where there were any, are part of the responses, in bold/strikethrough. Changes to the BACT and modeling appendices are described in narrative only

39554atsdappB – The clean update of the BACT analysis

39554atsdappC – A clean update of the modeling document.

Please let me know if there are any questions.

Thank you

Doug Logan
